2. ***Our business is subject to extensive regulation. If we fail to comply with the applicable regulations prescribed by governments and regulatory agencies, our business, results of operations and financial condition could be adversely affected.***

We operate in a highly regulated industry and our operations are subject to extensive regulation in each market in which we do business. Regulatory authorities in each of these markets must approve our products before we or our distribution agents can market them. Applicable regulations have become increasingly stringent, a trend which may continue in the future. The penalties for non-compliance with these regulations can be severe, including the revocation or suspension of our business licence, imposition of fines and criminal sanctions in those jurisdictions.

If we fail to comply with applicable statutory or regulatory requirements, there could be a delay in the submission or grant of approval for the manufacturing and marketing new products. Moreover, if we fail to comply with the various conditions attached to such approvals, licenses, registrations and permissions once received, the relevant regulatory body may suspend, curtail or revoke our ability to market such products or impose fines upon us. In the South America, Africa and many of the international markets in which we sell our products, the approval process for a new product is complex, lengthy and expensive. The time taken to obtain approvals varies by country, but generally takes between six months and several years from the date of application. If we fail to obtain such approvals, licenses, registrations and permissions, in a timely manner or at all, our business, results of operations and financial condition could be adversely affected.

3. ***Our success depends on our ability to commercialize new products in a timely manner.***

Our success largely depends upon our ability to commercialize new pharmaceutical products across various markets around the world. We must successfully develop, test and manufacture generic products and all of our products must meet and continue to comply with regulatory and safety standards and receive regulatory approvals from appropriate authorities. The process of commercialization of pharmaceutical formulations is time-consuming, involves significant investments and entails a high degree of business risk. Our overall profitability depends on, among other things, our ability to introduce new generic products in a timely manner, to continue to manufacture products cost-efficiently and to manage the life cycle of our global generic portfolio.

The time for commercial launch of a product varies between six months to three years and involves multiple stages during which the product may be abandoned as a result of factors such as, the inability to obtain necessary regulatory approvals in a timely manner or at all, and the inability to produce and market such new products successfully and profitably delays in any part of the process or our inability to obtain regulatory approvals for our products could have a material adverse effect on our business, prospects, results of operations and financial condition by restricting or delaying the introduction of new products.

4. ***Any manufacturing or quality control problems may damage our reputation for high quality products and expose us to litigation or other liabilities, which could adversely affect our financial results.***

Pharmaceutical manufacturers are subject to significant regulatory scrutiny. We own and operate manufacturing plant in India which has four manufacturing facilities thus, we are subject to

registrations, and manufacturing products in these facilities in accordance with current good manufacturing practices (“GMP”) stipulated by the BVQI,GMP,FDA, WHO, state level food and drug administrations and other regulatory agencies. Furthermore, we are liable for the quality of our products for the entire duration of the shelf life of the product. After our products reach the market, certain developments could adversely affect demand for our products, including any contamination of our products by intermediaries, re-review of products that are already marketed, new scientific information, greater scrutiny in advertising and promotion, the discovery of previously unknown side effects or the recall or loss of approval of products that we manufacture, market or sell. There can be no assurance that there will not be any regulatory actions, recalls of any of our products or investigations of our manufacturing facilities or our processes in the future by the regulatory agencies. Disputes over non-conformity of our products with such quality standards or specifications are generally referred to independent government approved testing laboratories. If any such independent laboratory confirms that our products do not conform to the prescribed or agreed standards and specifications, we would bear the expenses of replacing and testing such products, which could adversely affect our business, results of operations and financial condition.

We also face the risk of loss resulting from, and the adverse publicity associated with, manufacturing or quality problems. Such adverse publicity harms the brand image of our Company and products. We may be subject to claims resulting from manufacturing defects or negligence in storage and handling of our products. In certain jurisdictions in which we operate (such as the South America, Africa etc), the quantum of damages, especially punitive, awarded in cases of product liability can be extremely high. The existence, or even threat, of a major product liability claim could also damage our reputation and affect consumers’ views of our other products, thereby adversely affecting our business, results of operations and financial condition. Any loss of our reputation or brand image, for whatsoever reason may lead to a loss of existing business contracts and adversely affect our ability to enter into additional business contracts in the future.

5. ***We have applied for procuring the certificate/order approving the bonafide industrial use and conversion of agricultural land into non-agricultural land with respect to the land situated at Changodar, Sanand, however, the certificate/order for usage and conversion of the same is awaited.***

Our Company has purchased an agricultural land situated at Village: Changodar, Taluka: Sanand, Registration District and Sub-District: Ahmedabad under the provisions of Tenancy Act. Our Company has duly made an application before the Collector under section 63AA of the Gujarat Tenancy and Agricultural Lands Act, 1948 for certifying the usage of the said agricultural land for bona fide industrial purpose. However, the certificate confirming such usage is awaited. Further, our Company has also notified the Collector under section 65B of the Gujarat Land Revenue Code, 1879 notifying the usage of agricultural land for pharmaceutical purposes. However, the final order for usage and conversion 17 of the said agricultural land is awaited. As on date, the said land is vacant and our Company has no intention to make any construction or use it for industrial purpose. Failure to obtain the approval in relation to usage and conversion of the said land may lead to our inability to use the said land for the purpose intended.

6. ***Certain commercial agreements entered into by us impose several contractual obligations upon us. If we are unable to meet these contractual obligations and / or our customers perceive any deficiency in our service we may face legal liabilities and consequent damage to our reputation which may in-turn adversely impact our business, financial condition and results of operations.***

The commercial agreements entered into by us impose several contractual obligations upon us including compliance with certain quality norms, non-infringement, confidentiality, non-compete clauses and completion schedules as is typical of agreements entered into by companies in pharmaceutical sector. If we cannot perform the services undertaken by us in accordance with the requisite quality norms or if our client’s proprietary rights are infringed by our employees in violation of any applicable confidentiality agreements and / or our customers perceive any

deficiency or delay in service or breach of stipulated terms of these agreements, our customers may consider us liable for that act and seek damages from us.

In the ordinary course of our business we enter into contractual agreements with large domestic or global companies for technology transfer and for supply of products used for formulations. These companies could be in a better position to negotiate terms which may not be entirely favourable to us. There are also some contracts which may be terminable by our clients without cause on a short notice period affecting our business and creating uncertainty about our revenue flow at a particular point of time. Further, certain of the commercial agreements that we have entered into restrict us from providing services to competitors of our existing customers or restrict our ability to approach customers in certain jurisdictions.

Such clauses may restrict our ability to offer services to customers on terms preferred by our customers/ more favourable than those offered by our competitors. Further, given the stringent nature of obligations imposed by our commercial contracts, we face the risk of potential liabilities from lawsuits or claims by our customers for the breach of the terms of our contractual obligations and cannot assure you that such restrictions will not have an adverse effect on our business, financial condition and results of operations in the future.

7. ***Strong competition in the Ayurvedic & Herbal Medicine sector could decrease the market share and compel the company to either reduce the cost charged or increase the sales prices being charged to the end consumer. In either of the cases, we may have an adverse impact on the revenues and profitability.***

The industry in which we are operating is highly and increasingly competitive and unorganized. The competitive pricing and other factors may adversely affect our results of operations and financial condition. Competition may result in pricing pressures, reduced profit margins or loss market share or a failure to grow our market share, any of which could substantially harm our business and results of operations. There can be no assurance that we can effectively compete with our competitors in the future, and any such failure to compete effectively may have a material adverse effect on our business, financial condition and results of operations.

8. ***We could become liable to our customers, suffer adverse publicity and incur substantial costs as a result of defects in our products, which in turn could adversely affect the value of our brand, and our sales could be diminished if we are associated with negative publicity.***

Any failure or defect in our products could result in a claim against us for damages, regardless of our responsibility for such a failure or defect. We currently carry no products liability insurance with respect to our products. Although we attempt to maintain quality standards, we cannot assure that all our products would be of uniform quality, which in turn could adversely affect the value of our brand, and our sales could be diminished if we are associated with negative publicity

Also, our business is dependent on the trust our customers have in the quality of our products. Any negative publicity regarding our company, brand, or products, including those arising from a drop in quality of merchandise from our vendors, mishaps resulting from the use of our products, or any other unforeseen events could affect our reputation and our results from operations.

9. ***We are susceptible to volatility of prices of products marketed by us, including due to competitive products.***

Prices of the products marketed by us are subject to fluctuation, depending on, among other factors, the number of producers and their production volumes and changes in demand in the markets we serve. Volatility in price realization and loss of customers may adversely affect our profitability. Further, there is no assurance that we will be able to maintain our low cost of operations or to further reduce costs or develop new cost effective processes in the future, owing to factors beyond our control.

10. ***The success of our strategy of expanding presence in semi-regulated markets is dependent on a number of factors, some of which are beyond our control.***

One of our business strategies is to expand our sales and distribution activities in semi-regulated markets. The success of such expansion is dependent upon our obtaining requisite approval of the regulatory authorities for the products which we intend to sell, as well as timely renewal of existing accreditations. Any change in foreign governments or in foreign governmental policies, regulations, practices or focus that results in a slowdown or inability to obtain government approvals or product registrations could adversely affect this strategy, which in turn could adversely affect our business, financial condition and results of operations.

11. ***Non-compliance with the bar coding requirements stipulated by the Director General of Foreign Trade, ("DGFT"), from time to time, for primary, secondary and tertiary level packaging of finished pharmaceutical products for export, could adversely affect our goodwill, business, financial condition and results of operations.***

Pursuant to applicable notices, notifications and circulars issued by the DGFT, from time to time, we are required to comply with bar coding requirements for primary, secondary and tertiary level packaging of finished pharmaceutical products for export, provided, the importing country has not mandated a specific bar coding requirement. As the bar coding requirements mandated by the DGFT, are applicable in addition to the standard labelling requirements under the DCA and the Drug Rules, it may lead to an increase in packaging and other costs, thereby requiring us to allocate more resources and impeding our ability to operate and grow our business. Any non-compliance with the bar coding requirements as stipulated by the DGFT, could result in counterfeiting or piracy of our pharmaceutical products, thereby affecting our goodwill. We cannot assure you that we will be able to comply with all the bar coding requirements as stipulated by the DGFT, from time to time, within the prescribed time, or at all, failing which our goodwill, business, financial condition and results of operations could be adversely affected.

12. ***We rely extensively on our systems, including quality assurance systems, products processing systems and information technology systems, the failure of which could adversely affect our business, financial condition and results of operations.***

We depend extensively on the capacity and reliability of the quality assurance systems, product processing systems and information technology systems, supporting our operations. Considering the nature of our business and the industry in which we operate, it is imperative for us to have a robust information technology platform. If our data capturing, processing and sharing cannot be integrated and/ or we experience any defect or disruption in the use of, or damage to, our information technology systems, it may adversely affect our operations and thereby our business and financial condition. Our systems are also subject to damage or incapacitation by natural disasters, human error, power loss, sabotage, computer viruses, hacking, acts of terrorism and similar events or the loss of support services from third parties. Any disruption in the use of, or damage to, our systems may adversely affect our business, financial condition and results of operations.

13. ***If we do not maintain and increase the number of our arrangements for the distribution where we are not present or less present for our products, our business, results of operations and financial condition could be adversely affected.***

In most of the markets abroad in which we have a presence, we generally appoint a local third party entity who imports, registers and distributes our products. We have limited control over the operations and businesses of such local third party entities abroad. Our reliance on, and inability to control, our local marketing and distribution agents abroad could adversely affect our business, financial condition and results of operations. We may not be able to find suitable partners or successfully enter into arrangements on commercially viable terms or at all. Additionally, our distribution partners may make important marketing and other commercial decisions concerning our products without our input.

14. ***Our top 10 customers contribute around 49.39 % of our revenues from operations. Any loss of business from one or more of them may adversely affect our revenues and profitability.***

Our top 10 customers contribute around 49.39 % of our total sales for the year ending March 31, 2016. Any decline in our quality standards, growing competition and any change in the demand, may adversely affect our ability to retain them. We cannot assure that we shall generate the same quantum of business, or any business at all, and the loss of business from one or more of them may adversely affect our revenues and results of operations. However, the composition and revenue generated from these customers might change as we continue to add new customers in the normal course of business. We believe that we will not face substantial challenges in maintaining our business relationship with them or finding new customers.

15. ***Our Company's entire manufacturing facility is located at a single geographical location, and all of our Company's manufactured products are produced from such facility. Any delay in production at, or shutdown of, these facilities may in turn adversely affect our business, financial conditions and results of operations***

Our Company's manufacturing facility is at single location and all of our Company's products are manufactured from such facility at Changodar, Gujarat. Further, our business operations would be vulnerable to damage or interruptions in operations due to adverse weather conditions, earthquakes, fires, explosions, power loss, civil disturbances or other similar events which may affect this area. If our Company experiences delays in production or shutdown at such facilities due to any reason, including disruptions caused by disputes with its workforce or due to its employees forming a trade union or any natural disaster, our Company's ability to execute orders in a timely manner and its operations will be significantly affected, which in turn would have a material effect on its business, financial conditions and results of operations.

16. ***Our Company requires significant amount of working capital for a continued growth. Our inability to meet our working capital requirements may have an adverse effect on our results of operations.***

Our business is working capital intensive primarily on account of inventory levels. A significant portion of our working capital is utilized towards trade receivables and inventories. Summary of our working capital position is given below:-

Our Company intend to continue growing by reaching out to newer customers and also increasing the sales in the existing customers. All these factors may result in increase in the quantum of

current assets. Our inability to maintain sufficient cash flow, credit facility and other sources of fund, in a timely manner, or at all, to meet the requirement of working capital or pay out debts, could adversely affect our financial condition and result of our operations. For further details regarding working capital requirement, please refer to the chapter titled “Objects of the Issue” beginning on page 87 of this Prospectus.

17. ***We have applied for registration of trademark “Sakar Healthcare Private Limited”, however the same is currently pending registration and has been opposed.***

We reapplied for the registration of trademarks bearing registration number 2069102 result of which are still pending and awaited. We have applied for registration of the mark reflected herein in the name of our Company However, the same has been opposed by the Swiss Federal Institute of Intellectual Property, Stauffa Cherstrasse, Bern, Switzerland with regard to the design of a “cross” used in the same. In response thereto, our Company has filed Form TM-6, being the form of counter statement, stating that it is ready to remove the objectionable design used in the mark and is in process of amending it before the trademark registry, Ahmedabad. In support whereof, our Company has also filed Form TM 16, being the form for correction of clerical error, or for amendment which has been filed with the trademark registry on December 23, 2015. The status of the mark at the website of the trademark registry is currently reflected as ‘opposed’ and further procedure is awaited. We cannot assure you that the amendment would be accepted by the Registrar of Trademarks and Patents or that there would be no further opposition with regard to the amended mark proposed. Failure of registration of the same may impede our ability to claim ownership over it which in turn may adversely affect our business, financial condition and result of operation.

18. ***Our operations are subject to various employees, health and safety laws and regulations. Our failure to comply with environmental laws and similar regulations in India, including improper handling of raw materials, may result in significant damages and may have an adverse effect our business, financial condition and results of operations.***

Due to the nature of our business, we expect to be or continue to be subject to extensive and increasingly stringent environmental, health and safety laws and regulations and various labour, workplace and related laws and regulations. Our operations are subject to laws and regulations governing relationships with employees in such areas a minimum wage and maximum working hours, overtime, working conditions, hiring and terminating of employees, contract labour and work permits. Further, our business and prospects are contingent upon, among other things, receipt of all required health and safety permits, and our ability to comply with any conditions specified in such permits and registrations, on a continuous basis. Changes or concessions required by regulatory authorities may involve significant compliance costs and also result in delays, prevent completion of construction or opening of a plant or result in the loss of an existing license, which may adversely affect our business and results of operations.

Further, we are subject to various environmental laws and regulations relating to environmental protection in India. For example, the discharge or emission of chemicals, dust or other pollutants into soil or water that exceed permitted levels and cause damage may give rise to liabilities towards the government, especially the state pollution control boards and third parties, and may result in expenses to remedy any such discharge or emissions.

We are subject to environmental laws and regulations, including but not limited to:

- a. Environment (Protection) Act, 1986
- b. Air (Prevention and Control of Pollution) Act, 1981
- c. Water (Prevention and Control of Pollution) Act, 1974
- d. Hazardous Waste Management & Handling Rules, 2008
- e. Other regulations promulgated by the Ministry of Environment and Forests and the Pollution Control Boards of the state of Gujarat

which govern the discharge, emission, storage, handling and disposal of a variety of substances that may be used in or result from the operations of our business the scope and extent of new environmental regulations, including their effect on our operations, cannot be predicted and hence the costs and management time required to comply with these requirements could be significant. Amendments to such statutes may impose additional provisions to be followed by our Company and accordingly our Company needs to incur clean-up and remediation costs, as well as damages, payment of fines or other penalties, closure of production facilities for non-compliance, other liabilities and related litigation, could adversely affect our business, prospects, financial condition and results of operations.

Stricter laws and regulations, or stricter interpretation of existing laws and regulations may impose new liabilities or require additional investment in environmental protection equipment, either of which could adversely affect our business, financial condition or results of operation. Our failure to obtain required licenses or renew expired licenses or to otherwise comply with various regulatory requirements may have a material adverse effect on our financial conditions and results of operations.

19. *Our business operations involve handling and storage of hazardous materials. Risks arising from the same may result in damages to life and property, as also exposure to litigations.*

Pharmaceutical companies handle hazardous materials including explosive, toxic and combustible materials. We are also required to obtain several licenses and approvals for the storage and handling of such materials, which in turn impose several obligations and restrictions on our Company. If improperly handled or subjected to less than optimal conditions, these materials could harm employees and other persons, cause damage to life and to property and harm the environment. This in turn could subject our Company to significant penalties including closure of our manufacturing units and / or litigation which may have an adverse effect on our business and financial operations.

For a description of the regulations and laws applicable to our Company in this regard, please refer to the chapter titled “Key Industry Regulations and Policies” beginning on page 154 of this Prospectus. For details of licenses and approvals obtained by our Company for the storage and handling of certain materials, please refer to the chapter titled “Government and Other Statutory Approvals” beginning on page 250 of this Prospectus.

20. *Our Company’s expected production levels could be adversely affected by various factors.*

Manufacturers of products often encounter difficulties in production. These problems include difficulties with production costs and yields, product quality (caused by, among other things, process failure, equipment failure, human errors or other unforeseen events during the production cycle) and shortages of qualified personnel, as well as compliance with regulatory requirements. In addition, any material labour problems, such as a work stoppage or mechanical failure or malfunction could likewise lead to delays in production. Any of these problems could result in delay or suspension of production and may entail higher costs or other instalment expenses. Furthermore, if our Company’s suppliers fail to deliver necessary manufacturing equipment, raw materials or adequately perform the services outsourced by our Company to them, production deadlines may not be met. Any such developments could have a material adverse effect on our Company’s business and financial operations.

21. *Increasing employee compensation in India may erode some of our Company’s competitive advantages and may reduce profit margins.*

Employee compensation in India has historically been significantly lower than employee compensation in the US and Europe for comparable skilled professionals, which is one of our Company’s competitive strengths. However, increase in compensation levels in India may erode some of this competitive advantage and may negatively affect our profit margins. Employee compensation in India is currently increasing which could result in increased costs relating to scientists and engineers, managers and other professionals. Our Company may need to continue to increase levels of employee compensation to remain competitive and manage attrition. Any

increases in the amount of compensation paid to our Company's employees could have a significant effect on production costs, which may affect our position as a low-cost producer of Bulk drugs and have a material adverse effect on our business and financial operations.

22. *The average cost of acquisition of Equity Shares by our Promoters is lower than the Issue Price, in this case being Rs. 50 per equity shares*

Our Promoters average cost of acquisition of Equity Shares in our Company is lower than the issue price being Rs. 50 per equity shares as decided by the Company in consultation with the BRLM. For further details regarding average cost of acquisition of Equity Shares by our Promoters in our Company and build-up of Equity Shares by our Promoters in our Company, please refer to the chapters "Capital Structure" beginning on page 67 of this Prospectus respectively.

23. *We employ contract labourers for carrying out our manufacturing process by way of entering into contracts for a fixed period, subject to renewal options. Any delay in renewals or non-renewal of contracts on time shall affect the manufacturing timeline and thereby affecting our revenue from operations..*

Our industry being labour intensive, demands several labourers to maintain a smooth and stable production timeline. We employ contract labourers for carrying out our manufacturing process by way of entering into contracts for a fixed period, subject to renewal options. There can be no assurance that the relevant contractors will renew any of such contracts in time or at all. Any delay in renewals or non-renewal of contracts on time shall affect the manufacturing timeline and thereby affecting our revenue from operations. Further, these contracts are subject to several conditions, and our Company cannot assure that it shall be able to continuously meet such conditions, which may lead to cancellation, revocation or termination of relevant contracts.

24. *Our industry is labour intensive and our business operations may be materially adversely affected by strikes, work stoppages or increased wage demands by our employees or those of our suppliers.*

Our industry being labour intensive is highly dependent on labour force for carrying out its manufacturing operations. Shortage of skilled/unskilled personnel or work stoppages caused by disagreements with employees could have an adverse effect on our business and results of operations. We have not experienced any major disruptions in our business operations due to disputes or other problems with our work force in the past; however there can be no assurance that we will not experience such disruptions in the future. Such disruptions may adversely affect our business and results of operations and may also divert the management's attention and result in increased costs.

India has stringent labour legislation that protects the interests of workers, including legislation that sets forth detailed procedures for the establishment of unions, dispute resolution and employee removal and legislation that imposes certain financial obligations on employers upon retrenchment. We are also subject to laws and regulations governing relationships with employees, in such areas as minimum wage and maximum working hours, overtime, working conditions, hiring and terminating of employees and work permits. Although our employees are not currently unionized, there can be no assurance that they will not unionize in the future. If our employees unionize, it may become difficult for us to maintain flexible labour policies, and we may face the threat of labour unrest, work stoppages and diversion of our management's attention due to union intervention, which may have a material adverse impact on our business, results of operations and financial condition.

25. *We have historically derived a substantial portion of our revenue from the Domestic Market and the unregulated Markets.*

We derived a significant percentage of our revenue from the Domestic Market and the unregulated Markets. We are well positioned in the Domestic Market and we intend to increase our presence in the Regulated Market, especially Europe. We will continue to evaluate initiatives and strategies to

increase our presence in the Domestic Market and the Regulated Markets. We cannot assure you that we will be able to continue to generate a significant portion of our revenue from these markets. Any failure to do so may adversely affect our business, financial condition and results of operations.

26. ***We are subject to foreign currency exchange rate fluctuations which could have a material and adverse effect on our results of operations and financial conditions.***

We export our products and receive sale proceeds in foreign currency. Changes in value of currencies with respect to the Rupee may cause fluctuations in our operating results expressed in Rupees. The exchange rate between the Rupee and other currencies is variable and may continue to fluctuate in future. Fluctuations in the exchange rates may affect our Company to the extent of cost of goods and sales in foreign currency terms. Although we generally hedge our foreign exposure, any adverse or unforeseen fluctuations with respect to the unhedged exchange rate of any foreign currency for Indian Rupees may affect our Company's results of operations.

27. ***We require a number of approvals, NOCs, licences, registrations and permits in the ordinary course of our business. Some of the approvals are required to be transferred in the name of Sakar Healthcare Limited from Sakar Healthcare Private Limited pursuant to name change of our company and any failure or delay in obtaining the same in a timely manner may adversely affect our operations. Letter of issuance of TAN to the Company is currently not traceable.***

We require a number of approvals, licenses, registrations and permits in ordinary course of our business. Additionally, we need to apply for renewal of approvals which expire, from time to time, as and when required in the ordinary course. Also, we were a private limited company in the name of "Sakar Healthcare Private Limited" which was carrying business of manufacturing and marketing of their own pharmaceutical formulations for domestic and international markets. After complying with the relevant procedure of Companies Act, 2013, the said private limited company was converted into a public limited company in the 2013. After conversion there was change of name of the company from "Sakar Healthcare Private Limited" to "Sakar Healthcare Limited" pursuant to Rule 29 of the Companies (Incorporation) Rules, 2014. We shall be taking necessary steps for transferring the approvals in new name of our company. In case we fail to transfer/obtain the same in name of the company same may adversely affect our business or we may not be able to carry our business

The company has not applied for change of name of approvals. In case of delay or failure to obtain the same, it could affect our business operations. Any failure to renew the approvals that have expired, or to apply for and obtain the required approvals, licences, registrations or permits, or any suspension or revocation of any of the approvals, licences, registrations and permits that have been or may be issued to us, could result in delaying the operations of our business, which may adversely affect our business, financial condition, results of operations and prospects. Additionally, our company has not applied for change of name of the approval/s mentioned in pending approvals section of Government and Other Statutory Approvals Chapter. For more information, see chapter "Government and Other Statutory Approvals" on page 250 of this Prospectus.

28. ***If we are unable to source business opportunities effectively, we may not achieve our financial objectives.***

Our ability to achieve our financial objectives will depend on our ability to identify, evaluate and accomplish business opportunities. To grow our business, we will need to hire, train, supervise and manage new employees and to implement systems capable of effectively accommodating our growth. However, we cannot assure that any such employees will contribute to the success of our business or that we will implement such systems effectively. Our failure to source business opportunities effectively could have a material adverse effect on our business, financial condition and results of operations. It also is possible that the strategies used by us in the future may be different from those presently in use. No assurance can be given that our analyses of market and other data or the strategies we use or plans in future to use will be successful under various market conditions.

29. ***Changes in technology may render our current technologies obsolete or require us to make substantial capital investments.***

Modernization and technology upgradation is essential to reduce costs and increase the output. Our technology and machineries may become obsolete or may not be upgraded timely, hampering our operations and financial conditions and we may lose our competitive edge. Although we believe that we have installed latest technology and that the chances of a technological innovation are not very high in our sector we shall continue to strive to keep our technology, plant and machinery in line with the latest technological standards. In case of a new found technology in the manufacturing facilities, we may be required to implement new technology or upgrade the machineries and other equipment's employed by us. Further, the costs in upgrading our technology and modernizing the plant and machineries are significant which could substantially affect our finances and operations.

30. ***Our Company has unsecured loans which are repayable on demand. Any demand loan from lenders for repayment of such unsecured loans, may adversely affect our cash flows.***

As on March 2016, our Company has unsecured loans amounting to Rs. 735.70 lakhs from related parties that are repayable on demand to the relevant lender. Such loans are not repayable in accordance with any agreed repayment schedule and may be recalled by the relevant lender at any time. Any such unexpected demand or accelerated repayment may have a material adverse effect on the business, cash flows and financial condition of the borrower against which repayment is sought. Any demand from lenders for repayment of such unsecured loans, may adversely affect our cash flows. For further details of unsecured loans of our Company, please refer Annexure B-Details of Long Term Borrowings as Restated of chapter titled "*Financial Statements as restated*" beginning on page 201 of the Prospectus.

31. ***Introduction of alternative pharmaceutical products caused by changes in technology or consumer preferences may affect demand for our existing products which may adversely affect our financial results and business prospects.***

Our products are mainly used in the healthcare sector to cater to masses. Our business is affected by change in technology, consumer preferences, market perception of brand, attractiveness, convenience, safety and environmental norms. Our ability to anticipate such changes and to continuously develop and introduce new and enhanced products successfully on a timely basis will be a key factor in our growth and business prospects. There can be no assurance that we will be able to keep pace with the technological advances that may be necessary for us to remain competitive. Further, any substantial change in preference of consumers who are end users of our products will affect our customers' businesses and, in turn, will affect the demand for our products. Any failure to forecast and/or meet the changing demands of pharmaceutical businesses and consumer preferences may have an adverse effect on our business, profitability and growth prospects.

32. ***We have not made any alternate arrangements for meeting our capital requirements for the Objects of the issue. Further we have not identified any alternate source of financing the 'Objects of the Issue'. Any shortfall in raising / meeting the same could adversely affect our growth plans, business operations and financial condition.***

As on date of this Prospectus, we have not made any alternate arrangements for meeting our capital requirements for the objects of the issue i.e. to set up a new Lyophilization facility, to obtain new registrations, to register new products and working capital. We meet our capital requirements through our bank finance, debts, owned funds and internal accruals. Any shortfall in our net owned funds, internal accruals and our inability to raise debt in future would result in us being unable to meet our capital requirements, which in turn will negatively affect our financial condition and results of operations. Further we have not identified any alternate source of funding and hence any failure or delay on our part to raise money from this issue or any shortfall in the

issue proceeds may delay the implementation schedule and could adversely affect our growth plans. For further details please refer to the chapter titled “*Objects of the Issue*” beginning on page 87 of this Prospectus.

33. ***The Objects of this Issue are based on the internal estimates of our management, and have not been appraised by any bank or financial institution. The deployment of funds in the project is entirely at our discretion and as per the details mentioned in chapter titled "Objects of the Issue".***

Our funding requirements, the funding plans and the deployment of the proceeds of the Issue are based on our management estimates and have not been appraised by any bank or financial institution. The deployment of funds in the expansion project is entirely at our own discretion and the same will not be monitored by any external agency. We may have to revise our management estimates from time to time and consequently our funding requirements may also change. The estimates contained in the Prospectus may exceed the value that would have been determined by third party appraisals, which may require us to reschedule the deployment of funds proposed by us and may have a bearing on our expected revenues and earnings.

34. ***We have not entered into any technical support service agreements for the maintenance and smooth functioning of our equipment's and machineries, which may affect our performance.***

Our manufacturing processes involve daily use of technical equipment and machineries. They require periodic maintenance checks and technical support in an event of technical breakdown or malfunctioning. Our Company has entered into few technical support service agreements with competent third party. Although the Company has easy and quick accessibility to avail the technical support from the external experts and the machinery suppliers locally, any failure to quickly redress any technical issue, may increase our downtime which may affect our productivity, business and results of operations.

35. ***Under-utilisation of our proposed expansion or failure to obtain EU certifications or product registration may adversely impact our financial performance.***

The proposal to undertake the expansion of our existing facility is based on our estimates of market demand and profitability. One of the object for Issue is to apply for EU certifications and product registrations. We may in future encounter cost overruns or delays, for various reasons including non-receipt of approvals. Incase the certifications and registrations are not obtained or approved due to unforeseen events we cannot assure you that we will be able to identify another object within the anticipated time and costs. Till the time we don't identify another object the issue proceeds will be unutilized and will be later used at management's discretion. Also in the event of non-materialisation, of our estimates and expected order flow for our products, our capacities may not be fully utilised thereby adversely impacting our financial performance. Any one or combination of these factors could undermine the objects of the Issue and restrict our growth.

36. ***Our lenders have charge over our movable and immovable properties in respect of finance availed by us.***

Our Company have taken secured loan from banks by creating a charge over our movable and immovable properties in respect of loans/facilities availed by us. The total amounts outstanding and payable by us for secured loans were Rs. 1084.86 lakhs as on March 31, 2016. In the event we default in repayment of the loans / facilities availed by us and any interest thereof, our properties may be forfeited by lenders, which in turn could have significant adverse effect on our business, financial condition and results of operations. For further details please refer to “Annexure B- Details of Long Term Borrowings as Restated” and “Annexure K- Details of Short Term Borrowings as Restated” of chapter titled “Financial Statements as Restated” beginning on page 201 and Financial Indebtedness in chapter titled “Financial Indebtedness” on page 240 of this Prospectus.

37. ***Our insurance policies do not cover all risks, specifically risks like product defect/liability risk, loss of profits and terrorism. In the event of the occurrence of such events, our insurance coverage may not adequately protect us against possible risk of loss.***

Our insurance policies consist of, among others, standard fire and special perils, earthquake, etc. While we believe that we maintain insurance coverage in adequate amounts consistent with size of our business, our insurance policies do not cover all risks, specifically risks like product defect/liability risk, loss of profits, losses due to terrorism, etc. Further there can be no assurance that our insurance policies will be adequate to cover the losses in respect of which the insurance has been availed. If we suffer a significant uninsured loss or if insurance claim in respect of the subject-matter of insurance is not accepted or any insured loss suffered by us significantly exceeds our insurance coverage, our business, financial condition and results of operations may be materially and adversely affected.

38. ***Within the parameters as mentioned in the chapter titled “Objects of the Issue” beginning on page 87 of this Prospectus, our Company’s management will have flexibility in applying proceeds of the Issue. The fund requirement and deployment mentioned in the Objects of this Issue have not been appraised by any bank or financial institution.***

We intend to use fresh Issue Proceeds towards working capital requirements and to meet the issue expenses. We intend to deploy the Net Issue Proceeds in Financial Year 2016-2017 and such deployment is based on certain assumptions and strategy which our Company believes to implement in future. The funds raised from the fresh Issue may remain idle on account of change in assumptions, market conditions, strategy of our Company, etc., For further details on the use of the Issue Proceeds, please refer chapter titled “Objects of the Issue” beginning on page 87 of this Prospectus.

The deployment of funds for the purposes described above is at the discretion of our Company’s Board of Directors. The fund requirement and deployment is based on internal management estimates and has not been appraised by any bank or financial institution. Accordingly, within the parameters as mentioned in the chapter titled “Objects of the Issue” beginning on page 87 of this Prospectus, the management will have flexibility in applying the proceeds received by our Company from the Issue. However, the company shall comply with Section 27 of the Companies Act, 2013 before varying the Objects of the Issue. The Audit Committee will monitor the utilisation of the proceeds of this Issue.

39. ***We are dependent upon the growth prospects of the Healthcare Sector, where our products are largely used to cater masses.***

Our Company broadly falls under the pharmaceutical industry of which we undertake manufacturing and marketing of pharmaceutical products. Our products are used generally in the healthcare sector and thus cater to the requirements of the healthcare sector at large, thus any slowdown in the growth rate or downward trend in any healthcare facilities in the country directly or indirectly impact our own growth prospects and may result in decline in profits and turnover of sales.

40. ***Our ability to pay dividends in the future will depend upon our future earnings, financial condition, cash flows, working capital requirements, capital expenditure and restrictive covenants in our financing arrangements.***

We may retain all our future earnings, if any, for use in the operations and expansion of our business. As a result, we may not declare dividends in the foreseeable future. Any future determination as to the declaration and payment of dividends will be at the discretion of our Board of Directors and will depend on factors that our Board of Directors deem relevant, including among others, our results of operations, financial condition, cash requirements, business prospects and any other financing arrangements. Accordingly, realization of a gain on shareholders investments may largely depend upon the appreciation of the price of our Equity Shares. There can be no assurance that our Equity Shares will appreciate in value. For details of our dividend history, see “Dividend Policy” on page 200 of this Prospectus.

41. ***Our future funds requirements, in the form of fresh issue of capital or securities and/or loans taken by us, may be prejudicial to the interest of the shareholders depending upon the terms on which they are eventually raised.***

We may require additional capital from time to time depending on our business needs. Any fresh issue of shares or convertible securities would dilute the shareholding of the existing shareholders and such issuance may be done on terms and conditions, which may not be favourable to the then existing shareholders. If such funds are raised in the form of loans or debt, then it may substantially increase our interest burden and decrease our cash flows, thus prejudicially affecting our profitability and ability to pay dividends to our shareholders.

42. ***Our success depends largely upon the services of our Directors, Promoters and other Key Managerial Personnel and our ability to attract and retain them. Demand for Key Managerial Personnel in the industry is intense and our inability to attract and retain Key Managerial Personnel may affect the operations of our Company.***

Our success is substantially dependent on the expertise and services of our Directors, Promoters and our Key Managerial Personnel. They provide expertise which enables us to make well informed decisions in relation to our business and our future prospects. Our future performance will depend upon the continued services of these persons. Demand for Key Managerial Personnel in the industry is intense. We cannot assure you that we will be able to retain any or all, or that our succession planning will help to replace, the key members of our management. The loss of the services of such key members of our management team and the failure of any succession plans to replace such key members could have an adverse effect on our business and the results of our operations.

43. ***Our Company is dependent on third party transportation for the delivery of raw materials/ finished product and any disruption in their operations or a decrease in the quality of their services could affect our Company's reputation and results of operations.***

Our Company uses third party transportation for delivery of our raw materials and finished products. Though our business has not experienced any disruptions due to transportation strikes in the past, any future transportation strikes may have an adverse effect on our business. These transportation facilities may not be adequate to support our existing and future operations. In addition raw materials/ finished products may be lost or damaged in transit for various reasons including occurrence of accidents or natural disasters. There may also be delay in delivery of products which may also affect our business and results of operation negatively. An increase in the freight costs or unavailability of freight for transportation of our raw materials may have an adverse effect on our business and results of operations.

Further, disruptions of transportation services due to weather-related problems, strikes, lockouts, inadequacies in the road infrastructure and port facilities, or other events could impair ability to procure raw materials on time. Any such disruptions could materially and adversely affect our business, financial condition and results of operations.

44. ***Our Promoters / Directors/ Members have given personal guarantees in relation to certain debt facilities provided to our Company by our lender. In event of default on the debt obligations, the personal guarantees may be invoked thereby adversely affecting our Promoters/ Directors ability to manage the affairs of our Company and consequently this may impact our business, prospects, financial condition and results of operations.***

Some of the debt facilities provided to our Company by our lenders stipulate that the facility shall be secured by a personal guarantee of our Promoters/ Directors/ Members. In event of default on the debt obligations, the personal guarantees may be invoked thereby adversely affecting our Promoters/ Directors / Key Managerial Personnel(s) ability to manage the affairs of our Company and consequently this may impact our business, prospects, financial condition and results of operations. Further, in an event our Promoters/ Directors/ Members withdraws or terminates his/their guarantee/s or security, the lenders for such facilities may ask for alternate guarantee/s or securities or for repayment of amounts outstanding under such facilities or even terminate such

facilities. We may not be successful in procuring guarantee/s or collateral securities satisfactory to the lender and as a result may need to repay outstanding amounts under such facilities or seek additional sources of capital, which could adversely affect our financial condition. For more information, please see the chapter titled “Financial Indebtedness” beginning on page 240 of this Prospectus.

45. ***Our Company exports our products to countries including South America and African, countries etc. Any adverse events affecting these countries could have a significant adverse impact on our results from operations.***

We derive our major revenue from operations from export sales. Our Company exports its products to many countries namely South America and African countries etc. Consequently, any adverse changes in these economies such as slowdown in the economy, appreciation of the Indian Rupee vis-à-vis the currencies of these economies, acts of terrorism or hostility targeting these countries, etc. would directly impact our revenues and results from operations. In the event of change in policies or laws in these regions with respect to Environment, Health and Safety (EHS) norms, quality standards, branding or restrictions on usage of certain products/raw materials, our financial condition and business operations may be adversely affected. In case of any contingencies in future due to which we are unable to operate effectively in these markets, our results from operations, revenues and profitability may be adversely affected.

46. ***In addition to normal remuneration or benefits and reimbursement of expenses, some of our Directors and key managerial personnel are interested in our Company to the extent of their shareholding, dividend entitlement, if any, loan availed by our Company, as creditors of the Company etc.***

Our Directors and Key Managerial Personnel are interested in our Company to the extent of remuneration paid to them for services rendered and reimbursement of expenses payable to them. In addition, some of our Directors and Key Managerial Personnel may also be interested to the extent of their shareholding, dividend entitlement, if any; loan availed from them by our Company and credit balance due to them if any against purchases made from entities in which they are interested. For further information, see “Capital Structure” and “Our Management” and “Related Party Transactions” beginning on pages 67, 175 and 199, respectively, of this Prospectus.

47. ***Our Promoters and members of the Promoter Group will continue jointly to retain majority control over our Company after the Issue, which will allow them to determine the outcome of matters submitted to shareholders for approval.***

After completion of the Issue, our Promoters and members of the Promoter Group will collectively own 68.61 % of our equity share capital. As a result, our Promoters, together with the members of the Promoter Group, will continue to exercise a significant degree of influence over us and will be able to control the outcome of any proposal that can be approved by a majority shareholder vote, including, the election of members to our Board, in accordance with the Companies Act and our Articles of Association. Such a concentration of ownership may also have the effect of delaying, preventing or deterring a change in control of our Company.

In addition, our Promoters will continue to have the ability to cause us to take actions that are not in, or may conflict with, our interests or the interests of some or all of our creditors or minority shareholders, and we cannot assure you that such actions will not have an adverse effect on our future financial performance or the price of our Equity Shares.

48. ***Continued operations of our manufacturing facilities are critical to our business and any disruption in the operation of our manufacturing facilities may have a material adverse effect on our business, results of operations and financial condition.***

Our manufacturing facilities are subject to operating risks, such as unavailability of machinery, break-down, obsolescence or failure of machinery, disruption in power supply or processes, performance below expected levels of efficiency, labour disputes, natural disasters, industrial

accidents and statutory and regulatory restrictions. Our machines have limited lives and require periodic cleaning as well as annual over hauling maintenance. In the event of a breakdown or failure of such machinery, replacement parts may not be available and such machinery may have to be sent for repairs or servicing. This may lead to delay and disruption in our production process that could have an adverse impact on our sales, results of operations, business growth and prospects.

49. ***Our operations may be adversely affected in case of industrial accidents at our production facility.***

Usage and handling of machinery or any sharp part of any machinery by labour during production process, handling of chemicals and materials, short circuit of power supply for machines, etc. may result in accidents and fires, which could cause indirect injury to our labour, employees, other persons on the site and could also damage our properties thereby affecting our operations. Further our plants and machinery and personnel may not be covered under adequate insurance for occurrence of particular types of accidents which could adversely hamper our cash flows and profitability.

50. ***We could be harmed by employee misconduct or errors that are difficult to detect and any such incidences could adversely affect our financial condition, results of operations and reputation.***

Employee misconduct or errors could expose us to business risks or losses, including regulatory sanctions and cause serious harm to our reputation. There can be no assurance that we will be able to detect or deter such misconduct. Moreover, the precautions we take to prevent and detect such activity may not be effective in all cases. Our employees may also commit errors that could subject us to claims and proceedings for alleged negligence, as well as regulatory actions on account of which our business, financial condition, results of operations and goodwill could be adversely affected.

Issue related risk

51. ***After this Issue, the price of the Equity Shares may be highly volatile, or an active trading market for the Equity Shares may not develop.***

The price of the Equity Shares on the Stock Exchange may fluctuate as a result of the factors, including:

- a. Volatility in the Indian and global capital market;
- b. Company's results of operations and financial performance;
- c. Performance of Company's competitors,
- d. Adverse media reports on Company or pertaining to the Industry in which we operate;
- e. Changes in our estimates of performance or recommendations by financial analysts;
- f. Significant developments in India's economic and fiscal policies; and
- g. Significant developments in India's environmental regulations.

Current valuations may not be sustainable in the future and may also not be reflective of future valuations for our industry and our Company. There has been no public market for the Equity Shares and the prices of the Equity Shares may fluctuate after this Issue. There can be no assurance that an active trading market for the Equity Shares will develop or be sustained after this Issue or that the price at which the Equity Shares are initially traded will correspond to the price at which the Equity Shares will trade in the market subsequent to this Issue.

52. ***The Issue price of our Equity Shares may not be indicative of the market price of our Equity Shares after the Issue and the market price of our Equity Shares may decline below the issue price and you may not be able to sell your Equity Shares at or above the Issue Price.***

The Issue Price of our Equity Shares has been determined by book building method. This price is based on numerous factors (For further information, please refer chapter titled "Basis for Issue Price" beginning on page 98 of this Prospectus) and may not be indicative of the market price of our Equity Shares after the Issue. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. We cannot assure

you that you will be able to sell your Equity Shares at or above the Issue Price. Among the factors that could affect our share price include without limitation. The following:

- Half yearly variations in the rate of growth of our financial indicators, such as earnings per share, net income and revenues;
 - Changes in revenue or earnings estimates or publication of research reports by analysts;
 - Speculation in the press or investment community;
 - General market conditions; and
 - Domestic and international economic, legal and regulatory factors unrelated to our performance.
53. ***You will not be able to sell immediately on Stock Exchange any of the Equity Shares you purchase in the Issue until the Issue receives appropriate trading permissions.***

The Equity Shares will be listed on the Stock Exchange. Pursuant to Indian regulations, certain actions must be completed before the Equity Shares can be listed and trading may commence. We cannot assure you that the Equity Shares will be credited to investor's demat accounts, or that trading in the Equity Shares will commence, within the time periods specified in the Prospectus. Any failure or delay in obtaining the approval would restrict your ability to dispose of the Equity Shares. In accordance with section 40 of the Companies Act, 2013, in the event that the permission of listing the Equity Shares is denied by the stock exchange, we are required to refund all monies collected to investors.

54. ***Sale of Equity Shares by our Promoters or other significant shareholder(s) may adversely affect the trading price of the Equity Shares.***

Any instance of disinvestments of equity shares by our Promoters or by other significant shareholder(s) may significantly affect the trading price of our Equity Shares. Further, our market price may also be adversely affected even if there is a perception or belief that such sales of Equity Shares might occur.

EXTERNAL RISK FACTORS

Industry Risks

55. ***Changes in government regulations or their implementation could disrupt our operations and adversely affect our business and results of operations.***

Our business and industry is regulated by different laws, rules and regulations framed by the Central and State Government. These regulations can be amended/ changed on a short notice at the discretion of the Government. If we fail to comply with all applicable regulations or if the regulations governing our business or their implementation change adversely, we may incur increased costs or be subject to penalties, which could disrupt our operations and adversely affect our business and results of operations.

Other Risks

56. ***The Companies Act, 2013 has effected significant changes to the existing Indian company law framework, which may subject us to higher compliance requirements and increase our compliance costs.***

A majority of the provisions and rules under the Companies Act, 2013 have recently been notified and have come into effect from the date of their respective notification, resulting in the corresponding provisions of the Companies Act, 1956 ceasing to have effect. The Companies Act, 2013 has brought into effect significant changes to the Indian company law framework, such as in the provisions related to issue of capital, disclosures in Prospectus, corporate governance norms, audit matters, related party transactions, introduction of a provision allowing the initiation of class action suits in India against companies by shareholders or depositors, a restriction on investment by an Indian company through more than two layers of subsidiary investment companies (subject to certain permitted exceptions), prohibitions on loans to directors and insider trading and

restrictions on directors and key managerial personnel from engaging in forward dealing. To ensure compliance with the requirements of the Companies Act, 2013, we may need to allocate additional resources, which may increase our regulatory compliance costs and divert management attention.

The Companies Act, 2013 introduced certain additional requirements which do not have corresponding equivalents under the Companies Act, 1956. Accordingly, we may face challenges in interpreting and complying with such provisions due to limited jurisprudence on them. In the event, our interpretation of such provisions of the Companies Act, 2013 differs from, or contradicts with, any judicial pronouncements or clarifications issued by the Government in the future, we may face regulatory actions or we may be required to undertake remedial steps. We may face difficulties in complying with any such overlapping requirements. Further, we cannot currently determine the impact of provisions of the Companies Act, 2013 which are yet to come in force. Any increase in our compliance requirements or in our compliance costs may have an adverse effect on our business and results of operations.

57. *You may be subject to Indian taxes arising out of capital gains on the sale of the Equity Shares.*

Under current Indian tax laws and regulations, capital gains arising from the sale of equity shares in an Indian company are generally taxable in India. Any gain realised on the sale of shares on a stock exchange held for more than 12 months will not be subject to capital gains tax in India if the securities transaction tax ("STT") has been paid on the transaction. The STT will be levied on and collected by an Indian stock exchange on which equity shares are sold. Further, any gain realised on the sale of listed equity shares held for a period of 12 months or less will be subject to short term capital gains tax in India, if securities transaction tax has been paid on the transaction. Any gain realised on the sale of shares held for more than 36 months to an Indian resident, which are sold other than on a recognised stock exchange and as a result of which no STT has been paid, will be subject to long term capital gains tax in India. Further, any gain realised on the sale of equity shares held for a period of 36 months or less which are sold other than on a recognised stock exchange and on which no STT has been paid, may be subject to short term capital gains tax at a relatively higher rate as compared to the transaction where STT has been paid in India.

58. *Significant differences exist between Indian GAAP and other accounting principles, such as U.S. GAAP and IFRS, which may be material to the financial statements prepared and presented in accordance with SEBI ICDR Regulations contained in this Prospectus.*

As stated in the reports of the Auditor included in this Prospectus under chapter "Financial Statements as restated" beginning on page 201, the financial statements included in this Prospectus are based on financial information that is based on the audited financial statements that are prepared and presented in conformity with Indian GAAP and restated in accordance with the SEBI ICDR Regulations, and no attempt has been made to reconcile any of the information given in this Prospectus to any other principles or to base it on any other standards. Indian GAAP differs from accounting principles and auditing standards with which prospective investors may be familiar in other countries, such as U.S. GAAP and IFRS. Significant differences exist between Indian GAAP and U.S. GAAP and IFRS, which may be material to the financial information prepared and presented in accordance with Indian GAAP contained in this Prospectus. Accordingly, the degree to which the financial information included in this Prospectus will provide meaningful information is dependent on familiarity with Indian GAAP, the Companies Act and the SEBI ICDR Regulations. Any reliance by persons not familiar with Indian GAAP on the financial disclosures presented in this Prospectus should accordingly be limited.

59. *Taxes and other levies imposed by the Government of India or other State Governments, as well as other financial policies and regulations, may have a material adverse effect on our business, financial condition and results of operations.*

Taxes and other levies imposed by the Central or State Governments in India that affect our industry include:

- Custom duties on imports of raw materials and components;

- Excise duty on certain raw materials and components;
- Central and state sales tax, value added tax and other levies; and
- Other new or special taxes and surcharges introduced on a permanent or temporary basis from time to time.

These taxes and levies affect the cost and prices of our products and therefore demand for our product. An increase in any of these taxes or levies, or the imposition of new taxes or levies in the future, may have a material adverse effect on our business, profitability and financial condition.

60. *The nationalized goods and services tax (GST) regimes proposed by the Government of India may have material impact on our operations.*

The Government of India has proposed a comprehensive national goods and service tax (GST) regime that will combine taxes and levies by the Central and State Governments into a unified rate structure. Given the limited liability of information in the public domain covering the GST we are unable to provide/ measure the impact this tax regime may have on our operations.

61. *Political instability or a change in economic liberalization and deregulation policies could seriously harm business and economic conditions in India generally and our business in particular.*

The Government of India has traditionally exercised and continues to exercise influence over many aspects of the economy. Our business and the market price and liquidity of our Equity Shares may be affected by interest rates, changes in Government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India. The rate of economic liberalization could change, and specific laws and policies affecting the information technology sector, foreign investment and other matters affecting investment in our securities could change as well. Any significant change in such liberalization and deregulation policies could adversely affect business and economic conditions in India, generally, and our business, prospects, financial condition and results of operations, in particular.

62. *We cannot guarantee the accuracy or completeness of facts and other statistics with respect to India, the Indian economy and Pharmaceutical industry contained in the Prospectus.*

While facts and other statistics in this Prospectus relating to India, the Indian economy and the Pharmaceutical industry has been based on various government publications and reports from government agencies that we believe are reliable, we cannot guarantee the quality or reliability of such materials. While we have taken reasonable care in the reproduction of such information, industry facts and other statistics have not been prepared or independently verified by us or any of our respective affiliates or advisors and, therefore we make no representation as to their accuracy or completeness. These facts and other statistics include the facts and statistics included in the chapter titled 'Our Industry' beginning on page 115 of this Prospectus. Due to possibly flawed or ineffective data collection methods or discrepancies between published information and market practice and other problems, the statistics herein may be inaccurate or may not be comparable to statistics produced elsewhere and should not be unduly relied upon. Further, there is no assurance that they are stated or compiled on the same basis or with the same degree of accuracy, as the case may be, elsewhere.

63. *Conditions in the Indian securities market may affect the price or liquidity of our Equity Shares.*

The Indian securities markets are smaller than securities markets in more developed economies and the regulation and monitoring of Indian securities markets and the activities of investors, brokers and other participants differ, in some cases significantly, from those in the more developed economies. Indian stock exchanges have in the past experienced substantial fluctuations in the prices of listed securities. Further, the Indian stock exchanges have experienced volatility in the recent times. The Indian stock exchanges have also experienced problems that have affected the market price and liquidity of the securities of Indian companies, such as temporary exchange closures, broker defaults, settlement delays and strikes by brokers. In addition, the governing

bodies of the Indian stock exchanges have from time to time restricted securities from trading and limited price movements. A closure of, or trading stoppage on the SME Platform of BSE could adversely affect the trading price of the Equity Shares.

64. ***Global economic, political and social conditions may harm our ability to do business, increase our costs and negatively affect our stock price.***

Global economic and political factors that are beyond our control, influence forecasts and directly affect performance. These factors include interest rates, rates of economic growth, fiscal and monetary policies of governments, inflation, deflation, foreign exchange fluctuations, consumer credit availability, fluctuations in commodities markets, consumer debt levels, unemployment trends and other matters that influence consumer confidence, spending and tourism. Increasing volatility in financial markets may cause these factors to change with a greater degree of frequency and magnitude, which may negatively affect our stock prices.

65. ***Foreign investors are subject to foreign investment restrictions under Indian law that limits our ability to attract foreign investors, which may adversely impact the market price of the Equity Shares.***

Under the foreign exchange regulations currently in force in India, transfers of shares between non-residents and residents are freely permitted (subject to certain exceptions) if they comply with the pricing guidelines and reporting requirements specified by the RBI. If the transfer of shares, which are sought to be transferred, is not in compliance with such pricing guidelines or reporting requirements or fall under any of the exceptions referred to above, then the prior approval of the RBI will be required. Additionally, shareholders who seek to convert the Rupee proceeds from a sale of shares in India into foreign currency and repatriate that foreign currency from India will require a no objection/ tax clearance certificate from the income tax authority. There can be no assurance that any approval required from the RBI or any other government agency can be obtained on any particular terms or at all.

66. ***The extent and reliability of Indian infrastructure could adversely affect our Company's results of operations and financial condition.***

India's physical infrastructure is in developing phase compared to that of many developed nations. Any congestion or disruption in its port, rail and road networks, electricity grid, communication systems or any other public facility could disrupt our Company's normal business activity. Any deterioration of India's physical infrastructure would harm the national economy; disrupt the transportation of goods and supplies, and costs to doing business in India. These problems could interrupt our Company's business operations, which could have an adverse effect on its results of operations and financial condition.

67. ***The availability of spurious pharmaceutical products could lead to losses in revenues and harm the reputation of our products, which may in turn result in a material adverse effect on our business, financial condition and results of operations.***

We are exposed to the risk of spurious products or similar products not manufactured by us being sold under our name and brand. This practice by third parties may harm our corporate reputation and that of our brand. In the event that the spurious products are manufactured using our brand, we may have to establish that the spurious products are not manufactured and/or marketed by us so that we are able to defend any claim that may be made against us. In order to do so, we mark our products with specific batch numbers and manufacturing and expiry dates, which are maintained in our internal database at our manufacturing facility. We cannot assure you that by dubious activities/processes our products will not be replicated by the manufacturer of the spurious products, and therefore, may suffer financial losses as well as loss to our reputation, which may in turn result in a material adverse effect on our business, financial condition and results of operations.

68. ***Malpractices by some players in the industry affect overall performance of emerging Companies.***

The industry in which our Company operates is subject to risk associated with unethical business practices such as unethical marketing, dishonest advertising, questionable pricing practices, inaccurate claims with regards to safety and efficacy of the product etc. Consumers' attitude toward the industry today is dominated by a sense of mistrust, paving a way for regulators for stricter entry barriers and introduction of code of conducts; making the entire industry environment regulated and controlled. Malpractices by some players in the industry affects the overall performance of the emerging Companies like our as the industry norms are applicable to all at parity. Any unethical business practices by any industry player or intermediary may impact our business and results of operations.

69. ***Any downgrading of India's sovereign rating by an independent agency may harm our ability to raise financing.***

Any adverse revisions to India's credit ratings for domestic and international debt by international rating agencies may adversely impact our ability to raise additional financing, and the interest rates and other commercial terms at which such additional financing may be available. This could have an adverse effect on our business and future financial performance, our ability to obtain financing for capital expenditures and the trading price of our Equity Shares.

70. ***Natural calamities could have a negative impact on the Indian economy and cause our Company's business to suffer.***

India has experienced natural calamities such as earthquakes, tsunamis, floods etc. In recent years, the extent and severity of these natural disasters determine their impact on the Indian economy. Prolonged spells of abnormal rainfall or other natural calamities could have a negative impact on the Indian economy, which could adversely affect our business, prospects, financial condition and results of operations as well as the price of the Equity Shares.

71. ***Terrorist attacks, civil unrests and other acts of violence or war involving India or other countries could adversely affect the financial markets, our business, financial condition and the price of our Equity Shares.***

Any major hostilities involving India or other acts of violence, including civil unrest or similar events that are beyond our control, could have a material adverse effect on India's economy and our business. Incidents such as the terrorist attacks, other incidents such as those in US, Indonesia, Madrid and London, and other acts of violence may adversely affect the Indian stock markets where our Equity Shares will trade as well the global equity markets generally. Such acts could negatively impact business sentiment as well as trade between countries, which could adversely affect our Company's business and profitability. Additionally, such events could have a material adverse effect on the market for securities of Indian companies, including the Equity Shares.

GLOBAL ECONOMIC ENVIRONMENT

INTRODUCTION

Since the Economic Survey and Budget were presented a year ago, the Indian economy has continued to consolidate the gains achieved in restoring macro-economic stability. Inflation, the fiscal deficit, and the current account deficit have all declined, rendering India a relative haven of macro stability in these turbulent times. Economic growth appears to be recovering, albeit at varying speeds across sectors.

At the same time, the upcoming Budget and 2016-17 (FY-2017) economic policy more broadly, will have to contend with an unusually challenging and weak external environment. Although the major international institutions are yet again predicting that global growth will increase from its current subdued level, they assess that risks remain tilted to the downside. This uncertain and fragile outlook will complicate the task of economic management for India.

The risks merit serious attention not least because major financial crises seem to be occurring more frequently. The Latin American debt crisis of 1982, the Asian Financial crisis of the late 1990s, and the Eastern European crisis of 2008 suggested that crises might be occurring once a decade. But then the rapid succession of crises, starting with Global Financial Crisis of 2008 and proceeding to the prolonged European crisis, the mini-crises of 2013, and the China provoked turbulence in 2015 all hinted that the intervals between events are becoming shorter.

This hypothesis could be validated in the immediate future, since identifiable vulnerabilities exist in at least three large emerging economies China, Brazil, Saudi Arabia at a time when underlying growth and productivity developments in the advanced economies are soft. More flexible exchange rates, however, could moderate full-blown eruptions into less disruptive but more prolonged volatility.

One tail risk scenario that India must plan for is a major currency re-adjustment in Asia in the wake of a similar adjustment in China; as such an event would spread deflation around the world. Another tail risk scenario could unfold as a consequence of policy actions say, capital controls taken to respond to

curb outflows from large emerging market countries, which would further moderate the growth impulses emanating from them.

In either case, foreign demand is likely to be weak, forcing India in the short run to find and activate domestic sources of demand to prevent the growth momentum from weakening. At the very least, a tail risk event would require Indian monetary and fiscal policy not to add to the deflationary impulses from abroad. The consolation would be that weaker oil and commodity prices would help keep inflation and the twin deficits in check.

GLOBAL ECONOMIC OVERVIEW

The global macroeconomic landscape is currently chartering a rough and uncertain terrain characterized by weak growth of world output. The situation has been exacerbated by; (i) declining prices of a number of commodities, with reduction in crude oil prices being the most visible of them, (ii) turbulent financial markets (more so equity markets), and (iii) volatile exchange rates. These conditions reflect extreme risk-aversion behaviour of global investors, thus putting many, and in particular, commodities exporting economies under considerable stress.

One important positive outcome in 2015 is the modest pickup in the growth of some of the advanced economies. However, growth in emerging market and developing economies declined for the fifth consecutive year. As a result, overall global economic activity remained subdued in 2015. In its latest Update of the World Economic Outlook (WEO), published on 19 January 2016, the IMF projected growth in the global economy to improve from 3.1 per cent in 2015, to 3.4 per cent in 2016 and further to 3.6 per cent in 2017. Growth in advanced economies is projected at 2.1 per cent in 2016 and to continue through 2017 at the same rate.

The slowdown and rebalancing of the Chinese economy, lower commodity prices, and strains in some large Emerging Market and Developing economies (EMDE) are likely to continue to weigh on their growth prospects in 2016–17. Assessments indicate that mixed inflation developments in the EMDEs reflect the conflicting implications of weak domestic demand and lower commodity prices versus marked currency depreciations over the past year. The WEO update also indicated that India and the rest of emerging Asia are bright spots, with some other countries facing strong headwinds from China's economic rebalancing and global manufacturing weakness. World trade volume growth projections have been placed at 2.6 per cent and 3.4 per cent respectively for 2015 and 2016, which is much lower than what was estimated earlier in WEO in October 2015.

GLOBAL OUTLOOK FOR GROWTH

One important positive outcome in 2015 was the modest pick-up in growth in some of the advanced economies. It might be recalled that after falling in 2009 due to the 2008 global financial crisis, growth in emerging and developing economies rebounded in 2010 and 2011. While advanced economies also exhibited a recovery in 2010 thanks to the large stimuli, global growth continued to be tepid relative to the average of the decade ending 2006, largely on account of the slowdown in advanced economies. Spill over effects of the crisis may have been large, prolonged and bi-directional, given that the global integration is far greater than in the prior decade. This has made the task of projecting global economic outlook arduous. This uncertainty has led to the International Monetary Fund (IMF) revising the global growth outlook in its World Economic Outlook (WEO) four times a year since 2009.

In its latest WEO Update, published on 19 January 2016, the IMF has projected growth in the global economy to go up from 3.1 per cent in 2015 to 3.4 per cent in 2016 and further to 3.6 per cent in 2017, slightly lower than the projection published in October 2015. Growth in advanced economies is revised by 0.2 percentage points in 2016 to 2.1 per cent, to continue through 2017. Growth in the US is expected to remain resilient owing to strengthening of the housing and labour markets. Growth in the euro area is expected to increase due to stronger private consumption supported by lower oil prices and easy financial conditions is expected to outweigh the weakening in net exports. Growth in

Japan is also expected to consolidate in 2016, on the back of fiscal support, lower oil prices, accommodative financial conditions, and rising incomes.

Overall global economic activity remained subdued in 2015, as growth in emerging market and developing economies (EMDE) declined for the fifth consecutive year and recovery in advanced economies was modest. This is also attributable to the changing composition of the global economy and relative point contributions to global growth. The fall in the contribution of the EMDEs is not being made good by the advanced economies. A recent feature is that the Chinese economy is gradually slowing down and is transitioning from investment demand to consumption demand and from manufacturing to services. The concern over the spill over's of subdued global growth to other economies through trade channels and weaker commodity prices is manifest in diminishing confidence and increasing volatility in financial markets. In addition, a dual monetary policy—a gradual tightening in monetary policy in the US in the backdrop of its resilient recovery and easy monetary policy in several other major advanced economies has led to continued uncertainties and poses challenges for the year ahead. In the case of EMDEs, growth remained subdued at 4 per cent in 2015, but is projected to increase to 4.3 per cent in 2016 and 4.7 per cent in 2017. The slowdown and rebalancing of the Chinese economy, lower commodity prices, and strains in some large emerging market economies will continue to weigh on growth prospects in 2016–17. Assessments indicate that mixed inflation developments in EMDEs reflect the conflicting implications of weak domestic demand and lower commodity prices versus marked currency depreciations over the past year.

The 19 January WEO Update also indicated that India and the rest of emerging Asia are bright spots, albeit with some countries facing strong headwinds from China's economic rebalancing and global manufacturing weakness. The IMF's growth forecast for India is 7.5 per cent in 2016 and 2017 and this surpasses the projection of 6.3 per cent and 6.0 per cent respectively for China. The level of global economic activity has a significant and direct bearing on the growth prospects of the emerging economies through trade channels. As per the Update, world trade volume growth projections have been placed at 3.4 per cent and 4.1 per cent respectively for 2016 and 2017 lower by 0.7 percentage points to 0.5 percentage point respectively from WEO, October 2015. The World Bank's Report on Global Economic Prospects (January 2016) also estimated that India will grow by a robust 7.8 per cent in 2016 and 7.9 per cent in the following two years. Compared to other major developing countries, the report maintained that India is well positioned to withstand near-term headwinds and volatility in global financial markets due to reduced external vulnerabilities, a strengthening domestic business cycle, and a supportive policy environment.

BRIEF MANUFACTURING PROCESS

Forms of Product

The manufacturing process of Formulations differs from product to product i.e. between Tablets, Injectibles (Liquid or Dry Powder), Capsules and Powders. However, it typically involves a fixed series of steps under controlled conditions of temperature, relative humidity, hygiene and specific classified conditions to manufacture the finished products. For each product, we identify several alternative specification of manufacturing process and choose the most appropriate for the situation, viz., Stability during shelf life, economic, patent non-infringing, achieving a desired quality standard, environment impact, etc. It is then suitably packed in different packaging material like Strip Packing, Blister Packing, Bottle packing or Sachets depending on the requirements of the customer. The basic series of process for manufacturing is as follows

A. ORAL LIQUID

The dedicated Oral Liquid Products are manufactured in a controlled air environment under strict hygienic conditions, on fully automatic line. It is a fully automatic line from initial bottle washing up to the final packaging of the products. We have made efforts to secure a no contamination in order to achieve desired quality of the products. Further, we are having in-house facilities for manufacturing Pet Bottles on Fully Automatic Blowing Machine. The production process in this plant is suitable for both pet and glass bottles.

B. CAPSULES:

Our Company has automatic capsule filling machine which is suitable for filling powders and pellets. The machine is functional in use as they have capabilities for output and over rules handy operations. It also conforms to the GMP guidelines with various safety features for maximum protection. Capsule fillers are used to fill gelatin with pre determined quantity of liquids, powders, pellets, tablets. Capsules are normally fed into the machine, the filler then align, opens and accurately fills each capsule and recloses. Fillers generate minimum dust with lowest level of product loss. Non-separated, double loaded capsules and improperly inserted capsules are automatically rejected by machines to maintain the consistency in the quality of product. Most capsule fillers are characterized with fast changeover time to accommodate a variety of capsules in terms of shapes and size.

These machines requires minimal maintenance and easy to clean. Also, the installation of speed adjusting equipment and automatic counters ensures the right quantity of capsules being filled and packed.

C. TABLETS:

The manufacture of tablets is a complex multi-stage process under which the materials change their physical characteristics a number of times before the final dosage form is produced. The tablets have been made by granulation; wet granulation and dry granulation. Regardless of whether tablets are made by direct compression or granulation, the steps of milling and mixing is the same. Numerous unit processes are involved in making tablets, including particle size reduction and sizing, blending, granulation, drying, compaction, and (frequently) coating.

D. INJECTIBLES

Injectable drug products are developed into several different types depending upon the characteristics of the drug, the desired onset of action of the drug, and the desired route of administration. Once the pre-formulation and formulation studies have identified a suitable drug product, the next step includes learning how the formulation behaves/interacts in an aseptic manufacturing facility. At this point in the manufacturing process the formulated drug product enters the clean room. It remains under these conditions until the product is filled, stoppered, and capped. Microfilters are used to remove particles in the 0.1 to 10 micron size range from the formulated drug product. The next step in the process is to sterilize the solution using one of the filters. Once the product has been filtered into a sterile filling container and the filter passes the post-fill integrity test, it is now ready to fill into its primary container. Sterile tubing is placed into the sterile solution, which leads first to pumps and then to filling needles. Once the vials have been filled, they travel down the filling line to have pre-sterilized stoppers inserted. Caps are used to secure the stopper in the neck of the vial to prevent the stopper from coming out either over time or during handling. After the product has been manufactured, tested, it moves to Inspection. Once the product is released from Inspection, it moves to Labeling. After labeling, the product is packaged.

E. DRY POWDER

At first weighing and dispensing of all ingredients takes place required for manufacturing dry powder. Filtering of ingredients is done using a mechanical shifter. After filtering all the ingredients the powder is transferred to drum mixer. Drum mixer's provide efficient mixing and leave very little build up within the mixer. The drum mixers are configured in such a manner that proper mixing and as desired quality control of the end product is attained. The next step is filling and scaling of dry powder manufactured by automatic machine into the bottles. These bottles are then labelled using automatic labelling machine. After these bottles are labelled packing and cartoning of these bottles takes place using packing and cartoning machine.

APPROACH TO INDUSTRY ANALYSIS

Analysis of Pharmaceuticals Industry needs to be approached at both macro and micro levels, whether for domestic or global markets. Pharmaceuticals Industry forms part of Manufacturing Sector at a macro level. Hence, broad picture of Manufacturing Sector should be at preface while analysing the Pharmaceuticals Industry.

Manufacturing sector comprises various industries, which in turn, have numerous sub-classes or products. One such major industry in the overall Manufacturing sector is ‘Pharmaceuticals Industry’, which in turn encompasses various components one of them being “Analgesics, anti-emetics, anti-histamines etc.”.

Thus, Analgesics, anti-emetics, anti- histamines etc Segment should be analysed in the light of ‘Pharmaceuticals industry’ at large. An appropriate view on Analgesics, anti-emetics, anti-histamines etc Segment, then, calls for the overall economy outlook, performance and expectations of Infrastructure Sector, position of Pharmaceuticals Industry and micro analysis.

GLOBAL ECONOMIC ENVIRONMENT

INTRODUCTION

Since the Economic Survey and Budget were presented a year ago, the Indian economy has continued to consolidate the gains achieved in restoring macro-economic stability. Inflation, the fiscal deficit, and the current account deficit have all declined, rendering India a relative haven of macro stability in these turbulent times. Economic growth appears to be recovering, albeit at varying speeds across sectors.

At the same time, the upcoming Budget and 2016-17 (FY-2017) economic policy more broadly, will have to contend with an unusually challenging and weak external environment. Although the major international institutions are yet again predicting that global growth will increase from its current subdued level, they assess that risks remain tilted to the downside. This uncertain and fragile outlook will complicate the task of economic management for India.

The risks merit serious attention not least because major financial crises seem to be occurring more frequently. The Latin American debt crisis of 1982, the Asian Financial crisis of the late 1990s, and the Eastern European crisis of 2008 suggested that crises might be occurring once a decade. But then the rapid succession of crises, starting with Global Financial Crisis of 2008 and proceeding to the prolonged European crisis, the mini-crises of 2013, and the China provoked turbulence in 2015 all hinted that the intervals between events are becoming shorter.

This hypothesis could be validated in the immediate future, since identifiable vulnerabilities exist in at least three large emerging economies China, Brazil, Saudi Arabia at a time when underlying growth and productivity developments in the advanced economies are soft. More flexible exchange rates, however, could moderate full-blown eruptions into less disruptive but more prolonged volatility.

One tail risk scenario that India must plan for is a major currency re-adjustment in Asia in the wake of a similar adjustment in China; as such an event would spread deflation around the world. Another tail

risk scenario could unfold as a consequence of policy actions say, capital controls taken to respond to curb outflows from large emerging market countries, which would further moderate the growth impulses emanating from them.

In either case, foreign demand is likely to be weak, forcing India in the short run to find and activate domestic sources of demand to prevent the growth momentum from weakening. At the very least, a tail risk event would require Indian monetary and fiscal policy not to add to the deflationary impulses from abroad. The consolation would be that weaker oil and commodity prices would help keep inflation and the twin deficits in check.

GLOBAL ECONOMIC OVERVIEW

The global macroeconomic landscape is currently chartering a rough and uncertain terrain characterized by weak growth of world output. The situation has been exacerbated by; (i) declining prices of a number of commodities, with reduction in crude oil prices being the most visible of them, (ii) turbulent financial markets (more so equity markets), and (iii) volatile exchange rates. These conditions reflect extreme risk-aversion behaviour of global investors, thus putting many, and in particular, commodities exporting economies under considerable stress.

One important positive outcome in 2015 is the modest pickup in the growth of some of the advanced economies. However, growth in emerging market and developing economies declined for the fifth consecutive year. As a result, overall global economic activity remained subdued in 2015. In its latest Update of the World Economic Outlook (WEO), published on 19 January 2016, the IMF projected growth in the global economy to improve from 3.1 per cent in 2015, to 3.4 per cent in 2016 and further to 3.6 per cent in 2017. Growth in advanced economies is projected at 2.1 per cent in 2016 and to continue through 2017 at the same rate.

The slowdown and rebalancing of the Chinese economy, lower commodity prices, and strains in some large Emerging Market and Developing economies (EMDE) are likely to continue to weigh on their growth prospects in 2016–17. Assessments indicate that mixed inflation developments in the EMDEs reflect the conflicting implications of weak domestic demand and lower commodity prices versus marked currency depreciations over the past year. The WEO update also indicated that India and the rest of emerging Asia are bright spots, with some other countries facing strong headwinds from China's economic rebalancing and global manufacturing weakness. World trade volume growth projections have been placed at 2.6 per cent and 3.4 per cent respectively for 2015 and 2016, which is much lower than what was estimated earlier in WEO in October 2015.

GLOBAL OUTLOOK FOR GROWTH

One important positive outcome in 2015 was the modest pick-up in growth in some of the advanced economies. It might be recalled that after falling in 2009 due to the 2008 global financial crisis, growth in emerging and developing economies rebounded in 2010 and 2011. While advanced economies also exhibited a recovery in 2010 thanks to the large stimuli, global growth continued to be tepid relative to the average of the decade ending 2006, largely on account of the slowdown in advanced economies. Spill over effects of the crisis may have been large, prolonged and bi-directional, given that the global integration is far greater than in the prior decade. This has made the task of projecting global economic outlook arduous. This uncertainty has led to the International Monetary Fund (IMF) revising the global growth outlook in its World Economic Outlook (WEO) four times a year since 2009.

In its latest WEO Update, published on 19 January 2016, the IMF has projected growth in the global economy to go up from 3.1 per cent in 2015 to 3.4 per cent in 2016 and further to 3.6 per cent in 2017, slightly lower than the projection published in October 2015. Growth in advanced economies is revised by 0.2 percentage points in 2016 to 2.1 per cent, to continue through 2017. Growth in the US is expected to remain resilient owing to strengthening of the housing and labour markets. Growth in the euro area is expected to increase due to stronger private consumption supported by lower oil

prices and easy financial conditions is expected to outweigh the weakening in net exports. Growth in Japan is also expected to consolidate in 2016, on the back of fiscal support, lower oil prices, accommodative financial conditions, and rising incomes.

Overall global economic activity remained subdued in 2015, as growth in emerging market and developing economies (EMDE) declined for the fifth consecutive year and recovery in advanced economies was modest. This is also attributable to the changing composition of the global economy and relative point contributions to global growth. The fall in the contribution of the EMDEs is not being made good by the advanced economies. A recent feature is that the Chinese economy is gradually slowing down and is transitioning from investment demand to consumption demand and from manufacturing to services. The concern over the spill over's of subdued global growth to other economies through trade channels and weaker commodity prices is manifest in diminishing confidence and increasing volatility in financial markets. In addition, a dual monetary policy—a gradual tightening in monetary policy in the US in the backdrop of its resilient recovery and easy monetary policy in several other major advanced economies has led to continued uncertainties and poses challenges for the year ahead. In the case of EMDEs, growth remained subdued at 4 per cent in 2015, but is projected to increase to 4.3 per cent in 2016 and 4.7 per cent in 2017. The slowdown and rebalancing of the Chinese economy, lower commodity prices, and strains in some large emerging market economies will continue to weigh on growth prospects in 2016–17. Assessments indicate that mixed inflation developments in EMDEs reflect the conflicting implications of weak domestic demand and lower commodity prices versus marked currency depreciations over the past year.

The 19 January WEO Update also indicated that India and the rest of emerging Asia are bright spots, albeit with some countries facing strong headwinds from China's economic rebalancing and global manufacturing weakness. The IMF's growth forecast for India is 7.5 per cent in 2016 and 2017 and this surpasses the projection of 6.3 per cent and 6.0 per cent respectively for China. The level of global economic activity has a significant and direct bearing on the growth prospects of the emerging economies through trade channels. As per the Update, world trade volume growth projections have been placed at 3.4 per cent and 4.1 per cent respectively for 2016 and 2017 lower by 0.7 percentage points to 0.5 percentage point respectively from WEO, October 2015. The World Bank's Report on Global Economic Prospects (January 2016) also estimated that India will grow by a robust 7.8 per cent in 2016 and 7.9 per cent in the following two years. Compared to other major developing countries, the report maintained that India is well positioned to withstand near-term headwinds and volatility in global financial markets due to reduced external vulnerabilities, a strengthening domestic business cycle, and a supportive policy environment.

OVERVIEW GLOBAL ECONOMY

The world economy stumbled in 2015, amid weak aggregate demand, falling commodity prices and increasing financial market volatility in major economies. The world gross product is projected to grow by a mere 2.4 per cent in 2015, marking a downward revision from the 2.8 per cent forecast in the World Economic Situation and Prospects as of mid-2015. The growth rates of gross fixed capital formation and aggregate demand continue to remain subdued. The world economy is projected to grow by 2.9 percent in 2016 and 3.2 percent in 2017, supported by generally less restrictive fiscal and still accommodative monetary stances worldwide. The anticipated timing and pace of normalization of the United States monetary policy stance is expected to reduce policy uncertainties. While preventing expressive volatility in exchange rate and asset prices. The improvement in global growth is also predicated on easing of downward pressures on commodity prices, which should encourage new investments and lift growth, particularly in commodity dependent economies.

THE INDIAN ECONOMY

The Indian economy has continued to consolidate the gains achieved in restoring macroeconomic stability. A sense of this turnaround is illustrated by a cross-country comparison. In last year's Survey, we had constructed an overall index of macroeconomic vulnerability, which adds a country's fiscal deficit, current account deficit, and inflation. This index showed that in 2012 India was the most vulnerable of the major emerging market countries. Subsequently, India has made the most dramatic strides in reducing its macro-vulnerability. Since 2013, its index has improved by 5.3 percentage points compared with 0.7 percentage points for China, 0.4 percentage points for all countries in India's investment grade (BBB), and a deterioration of 1.9 percentage points in the case of Brazil (Figure 2).

If macro-economic stability is one key element of assessing a country's attractiveness to investors, its growth rate is another. In last year's Survey we had constructed a simple Rational Investor Ratings Index (RIRI) which combined two elements, growth serving as a gauge for rewards and the macro-economic vulnerability index proxying for risks. The RIRI is depicted in Figure 3; higher levels indicate better performance. As can be seen, India performs well not only in terms of the change of the index but also in terms of the level, which compares favourably to its peers in the BBB investment grade and even its "betters" in the A grade. As an investment proposition, India stands out internationally.

REVIEW OF MAJOR DEVELOPMENTS IN INDIAN ECONOMY

In the Advance Estimates of GDP that the Central Statistics Office (CSO) released recently, the growth rate of GDP at constant market prices is projected to increase to 7.6 per cent in 2015-16 from 7.2 per cent in 2014-15, mainly because private final consumption expenditure has accelerated. Similarly, the growth rate of GVA for 2015-16 is estimated at 7.3 per cent vis-à-vis 7.1 per cent in 2014-15. Although agriculture is likely to register low growth for the second year in a row on account of weak monsoons, it has performed better than last year. Industry has shown significant improvement primarily on account of the surprising acceleration in manufacturing (9.5 per cent vis-à-vis 5.5 per cent in 2014-15). Meanwhile, services continue to expand rapidly.

- Even as real growth has been accelerating, nominal growth has been falling, to historically low levels, an unusual trend highlighted in the Mid-Year Economic Analysis (MYEA), 2015-16.
- According to the Advance Estimates, nominal GDP (GVA) is likely to increase by just 8.6 (6.8) percent in 2015-16.
- In nominal terms, construction is expected to stagnate, while even the dynamic sectors of trade and finance are projected to grow by only 7 to 73/4 percent.
- Inflation remains under control The CPI-New Series inflation has fluctuated around 51/2 percent, while measures of underlying trends core inflation, rural wage growth and minimum support price increases have similarly remained muted. Meanwhile, the WPI has been in negative territory since November 2014, the result of the large falls in international commodity prices, especially oil. As low inflation has taken hold and confidence in price stability has improved, gold imports have largely stabilized, notwithstanding the end of a period of import controls
- Similarly, the external position appears robust. The current account deficit has declined and is at comfortable levels; foreign exchange reserves have risen to US\$351.5 billion in early February 2016, and are well above standard norms for reserve adequacy; net FDI inflows have grown from US\$21.9 billion in April-December 2014-15 to US\$27.7 billion in the same period of 2015-16; and the nominal value of the rupee, measured against a basket of currencies, has been steady. India was consequently well-positioned to absorb the volatility from the U.S. Federal Reserve actions to normalize monetary policy that occurred in December 2015. Although the rupee has declined against the dollar, it has strengthened against the currencies of its other trading partners.

- The fiscal sector registered three striking successes: on-going fiscal consolidation, improved indirect tax collection efficiency; and an improvement in the quality of spending at all levels of government.
- Government tax revenues are expected to be higher than budgeted levels. Direct taxes grew by 10.7 per cent in the first 9 months (9M) of 2015-16. Indirect taxes were also buoyant. In part, this reflected excise taxes on diesel and petrol and an increase in the Swachh Bharat cess. The central excise duty collection from petroleum products during April to December 2015-16 recorded a growth of 90.5 per cent and stood at Rs.1.3 lakh crore as against Rs. 0.7 lakh crore in the same period last year. Tax performance also reflected an improvement in tax administration because revenues increased even after stripping out the additional revenue measures (ARMs). Indirect tax revenues grew by 10.7 per cent (without ARMs) and 34.2 per cent (with ARMs).
- The main findings are that a welcome shift in the quality of spending has occurred from revenue to investment, and towards social sectors. Aggregate public investment has increased by about 0.6 per cent of GDP in the first 8 months of this fiscal year, with contributions from both the Centre (54 per cent) and states (46 per cent).

DEVELOPMENTS IN THE CAPITAL MARKET

PRIMARY MARKET

In 2015-16 (April-December), resource mobilization through the public and right issues has surged rapidly as compared to the last financial year. During 2015-16 (April- December), 71 companies have accessed the capital market and raised Rs.51,311 crore, compared to Rs.11,581 crore raised through 61 issues during the corresponding period of 2014-15.

The small and medium enterprises (SME) platform of the stock exchange is intended for small and medium sized companies with high growth potential, whose post issue paid-up capital is less than or equal to Rs. 25 crore. During 2015-16 (April- December), 32 companies were listed on the SME platform, raising a total amount of Rs.278 crore as compared to Rs.229 crore raised through 28 issues in the corresponding period of 2014-15.

Resources mobilized by mutual funds during April-December 2015 also increased substantially to Rs.1,61,696 crore from Rs.87,942 crore mobilized during the same period of the previous year.

SECONDARY MARKET

During 2015-16 so far, the Indian securities market has remained subdued (Figure 3.9). The Bombay Stock Exchange (BSE) Sensex declined by 8.5 per cent (upto 5 January 2016) over end-March 2015, mainly on account of turmoil in global equity markets in August 2015 following slowdown in China and its currency devaluation and slump in stocks. On 4 January 2016, weak Chinese manufacturing data again led to a global sell-off which caused the BSE Sensex also to decline by 538 points (2.1 per cent). The downward trend in the Indian stock market was also guided by mixed corporate earnings for Q1 and Q2 of 2015- 16, FPIs' concern over minimum alternative tax (MAT), weakening of the rupee against the US dollar, investor concern over delay in passage of the Goods and Services Tax (GST) Bill, uncertainty over interest rate hike by US Fed and selling by FPIs. However, the Indian equity market has been relatively resilient during this period compared to the other major EMEs. The Indian stock market withstood the US Fed increase in interest rates in December 2015.

INDUSTRIAL PERFORMANCE

The Index of Industrial Production (IIP) which provides quick estimates of the performance of key industrial sectors has started showing upward momentum. As per IIP, the industrial sector broadly comprising mining, manufacturing and electricity attained 3.1 per cent growth during April-December 2015-16 as compared to 2.6 per cent during the same period of 2014-15 due to the higher growth in mining and manufacturing sectors (Table 6.1). The mining, manufacturing and electricity sectors grew by 2.3 per cent, 3.1 per cent, and 4.5 per cent respectively during April-December 2015-16. The mining sector growth was mainly on account of higher coal production. The manufacturing sector was propelled by the higher production by the industry groups like furniture; wearing apparel, dressing and dyeing of fur; motor vehicles, trailers & semitrailers; chemicals and chemical products; refined petroleum products & nuclear fuel; and wood & products of wood. The growth in electricity is mainly contributed by higher growth in generation of thermal and nuclear sector.

In terms of use based classification, consumer durable goods have witnessed a remarkable growth at 12.4 per cent during April-December 2015-16. Basic goods and capital goods have registered 3.4 per cent and 1.7 per cent growth with intermediate goods by 1.9 per cent (Table 6.1).

The eight core infrastructure supportive industries, coal, crude oil, natural gas, refinery products, fertilizers, steel, cement and electricity that have a total weight of nearly 38 per cent in the IIP, registered a cumulative growth of 1.9 per cent during April-December 2015-16 as compared to 5.7 per cent during April-December 2014-15. Month-wise performance of the eight core sectors shows that the production of coal and fertilizers have increased substantially, while that of crude oil, natural gas and steel have mostly been negative. Refinery products, cement and electricity have attained moderate growth. Clearances for coal projects have facilitated production of coal. Crude oil and natural gas production declined because of a fall in production by Oil and Natural Gas Corporation (ONGC), Oil India Limited (OIL) and also private/joint venture (JV) companies in different months. In electricity generation, while the thermal and nuclear sectors have registered higher growth, the hydro sector has not performed well.

Table 6.1 depicts three months moving average month-on-month (M-o-M) growth of the IIP, manufacturing and eight core industries. The growth in industrial production, manufacturing sector and the eight core sectors started picking up again in December 2015. It is expected that the uptick in growth rate will be maintained due to revival in manufacturing production.

While the overall IIP has shown recovery, there is variation in the performance of some of the major industries during April-December 2015. While some sectors like electricity, coal, fertilizers, cement and passenger cars have shown positive growth, sectors like steel and aluminium have shown negative growth during April-December 2015.

MICRO SMALL AND MEDIUM ENTERPRISES SECTOR

With 3.6 crore units spread across the country, that employ 8.05 crore people, Micro, Small and Medium Enterprises (MSME) have a contribution of 37.5 per cent to the country's GDP. The sector has huge potential for helping address structural problems like unemployment, regional imbalances, unequal distribution of national income and wealth across the country. Due to comparatively low capital costs and their forward-backward linkages with other sectors, MSMEs will play a crucial role in the success of the Make in India initiative.

Realizing the importance of the MSME sector, the government has undertaken a number of schemes/programmes like the Prime Minister's Employment Generation Programme (PMEGP), Credit Guarantee Trust Fund for Micro and Small Enterprises (CGTMSE), Credit Linked Capital Subsidy Scheme (CLCSS) for Technology Up gradation, Scheme of Fund for Regeneration of Traditional Industries (SFURTI), and Micro and Small Enterprises- Cluster Development Programme (MSECDP) for the establishment of new enterprises and development of existing ones. Some of the new initiatives undertaken by the government for the promotion and development of MSMEs are as follows:

- **Udyog Aadhar Memorandum (UAM):** The UAM scheme, which was notified in September 2015 under section 8 of the MSME Development Act 2006, is a path-breaking step to promote ease of doing business for MSMEs. Under the scheme, MSME entrepreneurs just need to file an online entrepreneurs' memorandum to instantly get a unique Udyog Aadhaar Number (UAN). The information sought is on self-certification basis and no supporting documents are required. This marks a significant improvement over the earlier complex and cumbersome procedure.
- **Employment Exchange for Industries:** To facilitate match making between prospective job seekers and employers an employment exchange for industries was launched on June 15, 2015 in line with Digital India. More than 3.42 lakh job seekers have been registered on the portal as on December 30, 2015.

- **Framework for Revival and Rehabilitation of MSMEs:** Under this framework, which was notified in May 2015, banks have to constitute a Committee for Distressed MSME enterprises at zonal or district level to prepare a Corrective Action Plan (CAP) for these units.
- **A scheme for Promoting Innovation and Rural Entrepreneurs (ASPIRE):** ASPIRE was launched on March 16, 2015 with the objective of setting up a network of technology centres and incubation centres to accelerate entrepreneurship and promote start-ups for innovation and entrepreneurship in rural and agriculture based industry.

In addition, the government intends to provide more credit to MSME sectors, especially in the rural areas, focusing on skill development, encouraging entrepreneurial activities with optimistic mindset among rural youth and creating job opportunities among rural women, for high, inclusive and sustained industrial growth

OUTLOOK FOR GROWTH

Real GDP growth for 2015-16 is expected to be in the 7 to 7^{3/4} range, reflecting various and largely offsetting developments on the demand and supply sides of the Indian economy. Before analysing these factors, however, it is important to step back and note one important point. India's long-run potential GDP growth is substantial, about 8-10 percent. But its actual growth in the short run will also depend upon global growth and demand. After all, India's exports of manufactured goods and services now constitute about 18 percent of GDP, up from about 11 percent a decade ago.

Reflecting India's growing globalization, the correlation between India's growth rate and that of the world has risen sharply to reasonably high levels. For the period 1991-2002 this correlation was 0.2. Since then, the correlation has doubled to 0.42. In other words, a 1 percentage point decrease in the world growth rate is now associated with a 0.42 percentage point decrease in Indian growth rates.

Accordingly, if the world economy remains weak, India's growth will face considerable headwinds. For example, if the world continues to grow at close to 3 percent over the next few years rather than returning to the buoyant 4-4½ per cent recorded during 2003-2011, India's medium-term growth trajectory could well remain closer to 7-7½ per cent, notwithstanding the government's reform initiatives, rather than rise to the 8-10 per cent that its long-run potential suggests. In other words, in the current global environment, there needs to be a recalibration of growth expectations and consequently of the standards of assessment.

Turning to the outlook for 2016-17, we need to examine each of the components of aggregate demand: exports, consumption, private investment and government.

- To measure the demand for India's exports, we calculate a proxy-weighted average GDP growth rate of India's export partners. The weights are the shares of partner countries in India's exports of goods and services. We find that this proxy for export demand growth declined from 3.0 percent in 2014 to 2.7 per cent in 2015, which helps explain the deceleration in India's non-oil exports, although the severity of the slowdown—in fact, a decline in export volume—went beyond adverse external developments. Current projections by the IMF indicate that trading partner growth this demand will improve marginally this year to about 2.8 percent. But the considerable downside risks suggest that it would be prudent not to count on a big contribution to GDP growth from improving export performance.
- On the domestic side, two factors could boost consumption. If and to the extent that the Seventh Pay Commission (7th PC) is implemented, increased spending from higher wages and allowances of government workers will start flowing through the economy. If, in addition, the monsoon returns to normal, agricultural incomes will improve, with attendant gains for rural consumption, which over the past two years of weak rains has remained depressed.

- Against this, the disappearance of much of last year's oil windfall would work to reduce consumption growth. Current prospects suggest that oil prices (Indian crude basket) might average US\$ 35 per barrel next fiscal year compared with US\$ 45 per barrel in 2015-16. The resulting income gain would amount roughly equivalent to 1 percentage point of GDP – an 18 per cent price decline times a share of net oil imports in GDP of 6 percent. But this would be half the size of last year's gain, so consumption growth would slow on this account next year.
- According to analysis done by Credit Suisse, (non-financial) corporate sector profitability has remained weak, falling by 1 percent in the year to December 2015. This decline reflected a sharp deterioration in the financial health of the metals primarily steel companies, which have now joined the ranks of companies under severe financial stress. As a result, the proportion of corporate debt owed by stressed companies, defined as those whose earnings are insufficient to cover their interest obligations, has increased to 41 percent in December 2015, compared to 35 percent in December 2014.³ In response to this stress, companies have once again been compelled to curb their capital expenditures substantially.
- Finally, the path for fiscal consolidation will determine the demand for domestic output from government. The magnitude of the drag on demand and output will be largely equal to the size of consolidation, assuming a multiplier of about 1.
- There are three significant downside risks. Turmoil in the global economy could worsen the outlook for exports and tighter financial conditions significantly. Second, if contrary to expectations oil prices rise more than anticipated, this would increase the drag from consumption, both directly, and owing to reduced prospects for monetary easing. Finally, the most serious risk is a combination of the above two factors. This could arise if oil markets are dominated by supply-related factors such as agreements to restrict output by the major producers.
- The one significant upside possibility is a good monsoon. This would increase rural consumption and, to the extent that it dampens price pressures, open up further space for monetary easing.
- Putting these factors together, we expect real GDP growth to be in the 7 to 7 ^{3/4} per cent range, with downside risks because of on-going developments in the world economy. The wider range in the forecast this time reflects the range of possibilities for exogenous developments, from a rebound in agriculture to a full-fledged international crisis; it also reflects uncertainty arising from the divergence between growth in nominal and real aggregates of economic activity.

INDIA'S INCREASING IMPORTANCE TO GLOBAL GROWTH

Despite global headwinds and a truant monsoon, India registered robust growth of 7.2 per cent in 2014-15 and 7.6 per cent in 2015-16, thus becoming the fastest growing major economy in the world. As per the estimates of the International Monetary Fund (IMF), global growth averaged 3.1 per cent in 2015, declining from 3.4 per cent registered in 2014. While growth in advanced economies has improved modestly since 2013, the emerging economies have witnessed a consistently declining trend in growth rate since 2010. It is against this background that the recent Indian growth story appears particularly bright.

India has made striking progress in its contribution to the global growth of Gross Domestic Product (GDP) in Purchasing Power Parity (PPP) terms. PPP represents the number of units of a country's currency required to purchase the same amount of goods and services in the domestic market as the US dollar would purchase in the United States, thus adjusting for purchasing power differentials between currencies in relevant markets. India's contribution to global growth in PPP terms increased from an average of 8.3 per cent during the period 2001 to 2007 to 14.4 per cent in 2014. During the 1990s, the US's contribution to the global GDP growth in PPP terms was, on an average, around 16 percentage points higher than India's. The picture changed dramatically in 2013 and 2014 when India's contribution was higher than that of the US by 2.2 and 2.7 percentage points respectively. During 1991-2014, low growth in Japan (0.9 per cent annually) resulted in its low contribution (1.5 per cent) to global growth. India and China constitute 42.5 per cent and 53.2 per cent respectively of

the total PPP measure of the lower-middle income countries and upper-middle income countries; and hence those country groups largely reflect India's and China's patterns.

The global economy—in particular the global growth powerhouse, China is rebalancing, leading to an increasing role for India. After the onset of the multiple crises in different parts of the world, India's contribution has become much more valuable to the global economy.

India's share in world GDP has increased from an average of 4.8 per cent during 2001-07 to 6.1 per cent during 2008-13 and further to an average of 7.0 per cent during 2014 to 2015 in current PPP terms (IMF). India's resilience and current levels of reasonably strong growth should, thus, be appreciated in the light of its increasing contribution to global growth.

GLOBAL MANUFACTURING SECTOR

World manufacturing growth in the first quarter of 2016

World manufacturing growth continued to be sluggish in the first quarter of 2016 due to the fragile recovery process in industrialized economies and significantly weakened growth prospects in developing and emerging industrial economies. China, which has emerged as the largest global manufacturer in the aftermath of the protracted economic crisis, has entered a transition period and has adopted a more balanced pace, thus pushing the average industrial growth of emerging industrial economies downward. World manufacturing growth has also been affected by the generally lower growth pace in the United States and Japan, the second and third largest manufacturers in the world. Increasing pressure associated with financial volatility and falling oil prices has contributed to the instability of manufacturing growth in industrialized economies.

Despite the protracted period of low growth in industrialized as well as in developing and emerging economies, there is no sign of an imminent recession in global industrial production. World manufacturing output rose by 2.1 per cent in the first quarter of 2016 compared to the same period of the previous year, which is slightly higher than 1.8 per cent growth estimated for the last quarter of 2015. The production of durable goods, motor vehicles and consumer electronics is rising in industrialized and in developing economies. These positive growth trends were observed across country groups (Figure 1).

Industrialized economies marginally increased their quarterly growth rate in the first quarter of 2016 to 0.3 per cent from 0.2 per cent in the previous quarter. Some improvement in growth performance was observed in Europe, where manufacturing output rose by 2.3 per cent in the first quarter of 2016 compared to the same period of the previous year. The growth of manufacturing output slightly

increased in North America in the first quarter of 2016, but was still below 1.0 per cent. East Asia experienced a major blow, with manufacturing output dropping by nearly 3.0 per cent in the first quarter of 2016. Production decline was reported in two of East Asia's major manufactures, Japan and the Republic of Korea. Japan's yen began rising against other major currencies against the backdrop of an increased trade balance due to an earlier export surge, which has adversely affected manufacturing production in recent months. Production decline in East Asia had a negative impact on the manufacturing growth of industrialized countries as a whole.

Manufacturing growth in developing and emerging industrial economies remains weak due to a further slowdown in capital inflows from industrialized economies and a significant decline in exports. The slow recovery of industrialized economies and their dependence on external markets has exposed domestic structural problems in developing and emerging industrial economies, which have now been further compounded due to falling oil prices, compression of demand in domestic markets and high fluctuation in commodity prices. The downward trend of net capital inflows to developing economies continued, while exports from developing economies dropped by 13.0 per cent in 2015 (UNCTAD).

Despite the prolonged period of weak growth, developing and emerging industrial economies contributed around 90.0 per cent of global manufacturing growth in the first quarter of 2016. Manufacturing output in developing and emerging industrial economies increased by 4.7 per cent in the first quarter, slightly higher than in the previous quarter (4.5 per cent). As depicted in Figure 1, the pace of growth in both country groups exhibit similar trends but the level of growth has been consistently higher in developing and emerging industrial economies than in industrialized countries. However, growth performance varied considerably among the regions. While Asian economies persevered, manufacturing output dropped in Africa and Latin America. Manufacturing output declined in Egypt and South Africa in the first quarter of 2016. Similarly, a sharp plunge in production was observed in Brazil as a result of overall economic recession.

Industrialized economies

Industrialized countries maintained a positive growth of manufacturing output overall in the first quarter of 2016, however, the pace has been too slow over a protracted period. The average quarterly growth of industrialized economies in 2015 was below 1.0 per cent, and only 0.3 per cent in the first quarter of 2016 compared to the same period of the previous years. Growth in industrialized economies in the first quarter of 2016 was characterized by moderate growth in Europe and North America and a negative trend in East Asia. This trend has persisted for quite some time.

Among the industrialized regions, Europe's manufacturing output has grown consistently since 2014. Manufacturing output in the first quarter of 2016 rose by 2.3 per cent compared to the same period of the previous year. This is the highest growth rate registered in Europe since early 2014. The growth figures were positive for the majority of European countries, with strong growth performance of around 7.0 per cent or more being observed in Switzerland, Ireland, Lithuania and Slovenia.

At the peak of financial instability, UNIDO's Quarterly Reports presented disaggregated data for the eurozone economies to distinguish their growth trends from the rest of Europe. This difference seems to have disappeared in recent quarters. The growth trends for these two groups converged at the beginning of 2016. Eurozone economies, assisted by lower energy prices and a weaker euro, indicated a 2.2 per cent growth of manufacturing output in the first quarter of 2016. Germany, the largest manufacturer among the eurozone countries, performed well with an increase of 1.8 per cent in manufacturing output. Manufacturing output rose by 2.1 per cent in Italy and by 0.9 per cent in France. Manufacturing output also rose in Belgium (2.5 per cent), in the Netherlands (1.5 per cent) and in Spain (4.9 per cent). Greece recorded a second consecutive quarter of positive growth, with manufacturing output rising by 1.4 per cent in the first quarter of 2016.

Outside the eurozone, the manufacturing output of the United Kingdom declined by 1.3 per cent in the first quarter of 2016 compared to the same period of 2015. A potential Brexit has created considerable uncertainty, affecting business environment confidence and resulting in negative growth of manufacturing output. Among the other economies, the falling oil prices has hit the manufacturing

output of Norway and the Russian Federation particularly hard, where output dropped by 6.4 per cent and 3.4 per cent, respectively. The manufacturing output of East European countries demonstrated a relatively higher growth rate of 3.4 per cent in Poland, 7.3 per cent in Croatia and 5.3 per cent in Bulgaria.

The industrial production index in North America rose by 0.9 per cent in the first quarter of 2016. Canada outperformed the United States with a 2.7 per cent growth of manufacturing output, attributable primarily to the high growth in the production of motor vehicles. US manufacturing output rose by merely by 0.7 per cent against the backdrop of a decline in competitiveness due to a strong dollar and weak consumer spending.

In East Asia, manufacturing output rose in Malaysia by 4.2 per cent, while other major economies observed negative growth. Manufacturing output dropped by 3.2 per cent in Japan, 1.8 per cent in Singapore and by 3.8 per cent in the Republic of Korea. The manufacturing output of the industrialized economies of East Asia fell by 2.9 per cent.

Developing and emerging industrial economies

A slowdown in China and a downturn in Latin America have impacted the overall growth of manufacturing in developing and emerging industrial economies. The slowdown in China was modest; manufacturing output rose by 7.4 per cent. This is one of the slowest growth rates since 2005, but not when compared with other economies of the world. Due to strong domestic demand, China's manufacturing has proven resilient to external shocks. Compared to other economies, China has maintained relatively high growth rates under conditions of declining capital inflow and exports.

Latin American economies, on the other hand, were not equally resilient and were negatively affected by subdued global demand for commodities and falling oil prices. The manufacturing production in Latin America fell by 3.3 percent. In addition, Brazil, South America's largest manufacturer, faced political uncertainty, decreasing prices of export commodities and soaring inflation. The manufacturing output of Brazil in the first quarter of 2016 plunged by 11.2 per cent compared to the same period of the previous year. Manufacturing growth in other major economies of the continent, namely Argentina and Chile, was less than 1 per cent, while Peru's manufacturing production dropped by 1.6 per cent. Mexico and Columbia recorded relatively higher growth rates.

Growth performance was much higher in Asian economies, where manufacturing output rose by 6.3 per cent in the first quarter of 2016. As one of the fast growing Asian economies, Viet Nam has maintained a double digit growth rate of manufacturing output for five consecutive quarters. The overall growth of Viet Nam's economy has been driven by strength in export-oriented manufacturing, which continues to be driven by rising foreign direct investment. Indonesia's manufacturing output,

which recently climbed to rank 10 of the largest world manufacturers, grew by 3.7 per cent in the first quarter of 2016. India's manufacturing output, which had achieved impressive growth rates in the last quarters, fell by 2.2 per cent. The high cost of borrowing and poor demand played a major role in the pre-mature reversal of India's manufacturing growth in 2016. Manufacturing production also dropped in Pakistan in the first quarter of 2016.

Estimates based on the limited available data indicate that manufacturing output in Africa has dropped by 0.8 per cent. The loss in growth was attributable to two major African economies - Egypt and South Africa. Egypt's manufacturing output dropped by 1.4 per cent and South Africa's by 0.8 per cent compared to the same period of the previous year. The manufacturing output of Senegal and Tunisia decreased as well. The weaker growth of manufacturing output is primarily credited to low capital inflow and reduced exports. Positive growth was maintained by Côte d'Ivoire and Morocco.

Findings by industry group

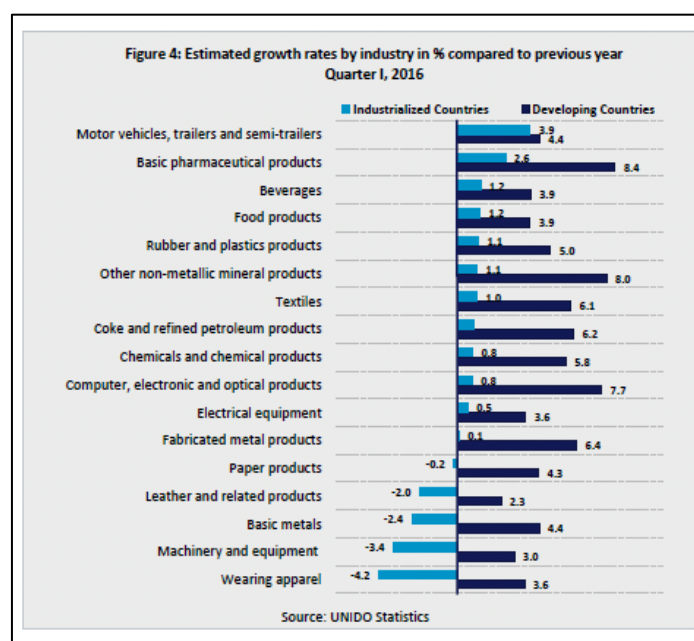

Global manufacturing production maintained a positive growth in nearly all industries in the first quarter of 2016. However, against the backdrop of falling investment in capital goods, the production of machinery and equipment declined by 1.1 per cent worldwide. The biggest loss was recorded by the tobacco industry, with worldwide production declining by 3.4 per cent. By contrast, the production of pharmaceutical products rose by 4.8 per cent. Among other fast growing industries, the production of textiles rose by 4.9 per cent and motor vehicles by 4.1 per cent.

Disaggregated data by industrialized and developing economies show that industrialized countries performed relatively well in the production of high-technology industries such as pharmaceutical products, motor vehicles, chemicals and electronics. The fastest growing industry in industrialized economies was the production of motor vehicles which rose by 3.9 per cent in the first quarter of 2016. Among them, vehicle production in Canada rose by 11.8 per cent, by 9.4 per cent in Italy and by 7.1 per cent in France. However, in Japan the production of motor vehicles fell by 5.3 per cent.

In general, the growth performance of developing and emerging industrial economies was far better in nearly all manufacturing industries, including several high-technology industries. The production of pharmaceutical products in developing and emerging industrial economies rose by the highest rate of 8.4 per cent. A significant contribution to the growth of pharmaceutical products was made by African countries, namely Egypt and Senegal.

As shown in the Figure 4, developing economies maintained a relatively higher growth rate in the production of basic consumer goods. The manufacture of food products rose by 3.9 per cent, textile by 6.1 per cent and wearing apparel by 3.6 per cent. The most significant growth rate among developing economies in the production of wearing apparel was observed in Turkey at 12.2 per cent in the first quarter of 2016. The production of other consumer goods rose at a higher rate in developing and emerging industrial economies. Among other industries, the production of chemicals and chemical products grew by 5.8 per cent and basic metals by 4.4 per cent.

The growth rates for selected industries are presented below.

The production of electronic and optical products registered one of the highest growth figures at 7.7 per cent in developing and emerging industrial economies. Similarly, the manufacture of other non-metallic mineral products that essentially supply construction materials rose by nearly 8.0 per cent.

Additional statistics on the growth rates in the first quarter of 2016 are available in the Statistical Tables.

GLOBAL OVERVIEW OF PHARMACEUTICAL INDUSTRY

Emerging Markets- Brazil

Market Size & Structure

With market size of US\$ 26 billion, Brazil is the sixth largest pharmaceutical market in the world. The industry has grown steadily at a CAGR (%) of 17% over the past five years aided by rising income levels and increasing access to healthcare on back of government led programmes and pro-generic reforms. Brazil has primarily been a branded generics market with prescriptions contributing to almost half of the industry size. However, the share of generics has been increasing over the years on back of government's pro-generic initiatives. In 2004, the Brazilian government introduced Farmacia Popular, a program that was aimed at broadening the access of affordable medicines. According to industry estimates, nearly 3/4th of drugs forming part of this programme are currently generics. As a result of this initiative, the share of generics in the industry has increased from 14% in CY 2008 to 22% in CY 2012.

In line with other developing countries, Brazil also depends heavily on private spending on healthcare with 'out-of-pocket' contributing almost 80% of healthcare expenditure. However, to curb healthcare costs, the government is gradually increasing its role by including additional drugs under its bulk procurement programme.

(Source: *Indian Pharmaceutical Industry- An Update on Emerging Markets– A Key Export Destination*, ICRA Research Services, www.icra.in)

Competitive Landscape

In terms of market composition, MNCs pharma companies have a strong foothold in the branded generics segment, while local players dominate the generics segment. The share of domestic companies has however been with rising proportion of generics. Despite increasing share of local players, Brazil still remains a net importer of pharmaceuticals. Given this scenario, the government has introduced several policies over time to encourage domestic manufacturing, whose share has been rising gradually.

Among Indian companies, Torrent Pharma, Glenmark and Cadila Healthcare have reasonable presence in Brazil. In FY 2014, Torrent generated almost 58% of its Rest of the World (RoW) revenues from Brazil, which it has built through scale-up in new products after acquiring a local company back in 2002. Glenmark too has scaled-up its revenues from Latin America (with Brazil being the key market) at CAGR of 31% over the past five years.

Regulatory Landscape & Challenges

Notwithstanding its growth potential, the operating environment in Brazil has become somewhat challenging over the past couple of years – contributed by delays in receiving approvals from regulatory agency (ANVISA) for new product launches and increasing competitive pressures from domestic players. In addition, development of unbranded generics has also hurt profitability in the branded generics space. The industry is also going through a phase of consolidation owing to entry of large wholesalers and big retail chains acquiring smaller ones.

The Indian Pharma companies have adjusted their business plans in line with these challenges. For instance, while Torrent is increasing its presence in the pure generics space and institutional business (i.e. government tenders), Glenmark has been trying to build a product portfolio in some niche therapies like respiratory, dermatology and oncology. Both Glenmark and Cadila have also been investing in developing presence in other LATAM markets like Mexico and Venezuela. Some of the companies have also been scouting for in-organic investment opportunities as well. During FY 2014, Lupin acquired a Mexico-based branded pharma company with presence in the ophthalmology segment.

Emerging Markets- Russia

Market Size & Structure

With a market size of ~US\$ 25 billion, Russia ranks as the seventh largest pharmaceutical market globally. Although the industry has registered a CAGR of 13% (in local currency terms) over the past five years, the growth momentum has slowed down over the past few years on back of price cuts and weakening economic growth. Despite challenges on the economy front, the demand continues to remain relatively stable on back of improving access to healthcare as a result of government's healthcare programmes. The pharmaceutical market can be broadly divided in three segments – Retail, Hospitals and Federal Reimbursement Program (FRP). In absence of a national drug provision insurance system, Russia's pharmaceutical market also depends on private spending on healthcare,

which contributes almost 75% to industry sales (in value terms). The other two segments – Hospitals and FRP accounted for 15% and 10% of the total industry in 2013. The FRP segment refers to Government's reimbursement program which includes two key programmes - the essential drug management, called ONLS and 7 "Nosologies" program. Although essential drug list in Russia covers a substantial proportion (44% in 2013) of the industry but FRP's coverage is fairly limited as only a small fraction of the country's population qualifies for drug reimbursements at present.

Competitive Landscape

The Russian pharmaceutical industry is highly fragmented and is largely dominated by foreign pharmaceutical companies given the absence of a well developed domestic pharmaceutical industry. In 2013, nearly 76% of drugs sold in Russia were imported with balances being produced by local companies. Nine out of the top-10 pharmaceutical companies in Russia have foreign ownership and majority of them are the big pharma MNCs including Novartis, Sanofi Aventis, Bayer, Nycomed etc. With revenues of RUR 56 billion (or US\$ 1.75 billion) and a market share of 3.7% (in 2013), Pharmstandard is the only domestic player that features among the top-10 pharma companies in the country. Given the dependence on imports, the Russian Government has put in place a strategy to promote the development of the domestic industry which aims to achieve at least 50% import substitution by 2020.

Indian pharma companies have relatively strong presence in Russia

Russia and the CIS region has been an important market for Indian pharmaceutical companies, with most of the leading companies having a presence there. However, Dr. Reddy's and Ranbaxy are the only two players among leading pharma companies that have sizeable presence in Russia and the CIS region. In FY 2014, Dr. Reddy's generated revenues of \$270 million from Russia, which along with the CIS region accounted for 75% of its emerging markets business (excluding India). So far, Dr. Reddy's has focused on increasing market traction of its key brands (i.e. Omez, Nise, Ketorol, Ciprolet etc.) and building a strong OTC portfolio (39% to its revenues from Russia). However, going forward, it aims to build a portfolio of 'differentiated' and 'complex' products with focus on oncology and biosimilars.

Emerging Markets- South Africa

Market Size & Structure

With a market size of US\$ 3.1 billion, South Africa is the largest and the most developed pharmaceutical market within the African continent. Over the past five years, the private market (excluding government procurement) has grown at CAGR (%) of 8% driven by improving healthcare infrastructure, increasing income levels and rising demand for drugs to treat chronic diseases. While structural drivers remain intact, the industry growth has witnessed some moderation over the past couple of years from 12.4% (in FY 2012) to 4.3% (in FY 2014) on back of weak economic environment.

Similar to other emerging markets, 'out of pocket' spending on healthcare accounts for almost 85% of pharmaceutical sales in South Africa. Nearly 40% of the private market is prescription driven, while OTC and generics contribute almost 27-28% each. Driven by government's pro-generic reforms, the share of generics has however been rising steadily and is poised for steady growth on back of gradual implementation of National Health Insurance (NHI) scheme. Although private sector dominates the overall industry, the share of government procurement grew by 33% in FY 2014 compared to a growth of 4.3% witnessed by the private sector. Majority of public sector spending on healthcare comprises tenders for ARVs and other life saving drugs, where domestic players are offered preferential terms.

Competitive Landscape – Generic Segment

South Africa also has an established local industry with the top-3 players being domestic companies. Aspen is the market leader in the generic segment with ~33% share followed by Cipla Medpro (16%) and Adcock Ingram (9%). Given the meaningful presence of Indian companies, South Africa features among the top-3 export destinations from India after United States and Russia. Over the past five years, pharmaceutical exports to South Africa have grown at a CAGR (%) of 24% and were estimated to be around US\$ 475 million in FY 2014 (8% of India's pharma exports). Among Indian firms, Cipla is one of the leading players in South Africa owing to its acquisition of Medpro. Cipla Medpro is the 2nd largest player in the generic segment and 3rd largest overall in South Africa. Apart from Cipla, Lupin also has a considerable presence in South Africa by virtue of its acquisition of Pharma Dynamics (PD). After acquiring PD in 2008, Lupin has steadily scaled-up its revenues (up 300% in five years) driven by focus on chronic therapies. Among other firms, Ranbaxy and Dr. Reddy's are also positioned among the top-10 generic companies in South Africa with business model focused on branded generics and ARV tender supplies to some extent.

Regulatory Landscape & Challenges

Although generic segment is poised for steady growth, weak economic fundamentals are likely to put pressure pharmaceutical sales given the dependence on-out-of pocket on healthcare spending. The depreciation of South African Rand is likely to further add to pressure on margins of foreign pharma companies operating in South Africa. Over the past 12 months, the Rand has continued to trade weaker, declining by ~10% against major currencies. However, the adverse impact of lower realizations for foreign pharma companies is mitigated to some extent by the fact the domestic players operating in South Africa also depend on imported APIs, which become costlier owing to currency depreciation.

The South African pharmaceutical market is also exposed to evolving regulatory developments, which can influence the operating environment for pharma companies. Some of the key reforms being evaluated by the government include a) introduction of international benchmarks for pricing, b) prohibition medicine supplies based on incentive schemes, and c) rational price hikes for essential drugs.

Emerging Markets- Middle East and North African

Structural growth drivers are intact but political instability remains a challenge

The Middle East and North African (MENA) region also represents an important market segment for Indian pharma companies. Driven by a convergence of demographic changes, increased healthcare investments, and rising demand for drugs to treat chronic diseases, this region potentially represents a US\$ 20-25 billion opportunity by 2020. At present, the private pharmaceutical segment in the top nine markets is estimated to be ~US\$ 11 billion in size with Saudia Arabia, Egypt, Algeria, UAE and Morroco being the top-5 important markets.

Growth rates vary across MENA region

Although most of the countries in the region have been focusing on expanding investments in the healthcare space, the growth rates vary quite sharply across the region. For instance, the pharmaceutical industry in the top-9 markets have grown anywhere between 2-17% CAGR over the past three years (CY 2011-13). While markets like UAE, Saudi Arabia and Lebanon have grown in double digit terms, pharmaceutical sales in countries like Morocco and Egypt have been affected by lingering political instability and challenges in providing adequate healthcare services, respectively. With region's high dependence on oil exports, the recent sharp drop in crude oil prices present a further challenge as it could lead to lower healthcare budgets by some nations. Nonetheless, the relatively low spending on healthcare, sizeable aging population and focus to reduce reliance in costlier branded or innovator drugs are likely to drive demand for cost effective generic drugs in the region.

EVOLVING GENERIC OPPORTUNITIES OF INDIAN FIRMS HAVE SUPPORTED GROWTH IN PHARMA EXPORTS

(Source: Indian Pharmaceutical Industry- An Update on Emerging Markets– A Key Export Destination, ICRA Research Services, www.icra.in)

Emerging markets have also been a sustainable source of growth

- India's pharmaceutical exports have grown at CAGR of 14% over the past five years (i.e. FY 2009-14) to touch US\$14.9 billion in FY 2014. With steadily expanding generic opportunities on back of patent expiries in the U.S. and increasing focus of Indian companies, formulations exports have grown at a much faster pace (up 21%) and now contribute over 70% to India's pharma exports.
- While exports to developed markets have been the key growth driver (up 26% in past five years), emerging markets too have contributed meaningfully. Aided by expanding geographical reach, product portfolio and cost-competitive R&D and manufacturing capabilities, India's exports to emerging markets have grown at CAGR of 18% over the past five years.
- Although U.S. contributes nearly 1/3rd to India's pharma exports, some of the key emerging markets such as Russia, South Africa and Brazil now feature among the top- 10 export destinations from India. Collectively, emerging markets also contribute to almost 20% to revenues of top-10 pharma companies, which also reflects the impact of in-organic investments by Indian companies in some of the key markets.

INDIAN PHARMACEUTICALS INDUSTRY

Introduction

The Indian pharmaceuticals market is the third largest in terms of volume and thirteenth largest in terms of value#. Branded generics dominate the pharmaceuticals market, constituting nearly 70 to 80 per cent of the market. India is the largest provider of generic drugs globally with the Indian generics accounting for 20 per cent of global exports in terms of volume. Of late, consolidation has become an important characteristic of the Indian pharmaceutical market as the industry is highly fragmented.

India enjoys an important position in the global pharmaceuticals sector. The country also has a large pool of scientists and engineers who have the potential to steer the industry ahead to an even higher level. Presently over 80 per cent of the antiretroviral drugs used globally to combat AIDS (Acquired Immuno Deficiency Syndrome) are supplied by Indian pharmaceutical firms.

The UN-backed Medicines Patent Pool has signed six sub-licences with Aurobindo, Cipla, Desano, Emcure, Hetero Labs and Laurus Labs, allowing them to make generic anti-AIDS medicine Tenofovir Alafenamide (TAF) for 112 developing countries.

Market Size

The Indian pharma industry, which is expected to grow over 15 per cent per annum between 2015 and 2020, will outperform the global pharma industry, which is set to grow at an annual rate of 5 per cent between the same period##.The market is expected to grow to US\$ 55 billion by 2020, thereby emerging as the sixth largest pharmaceutical market globally by absolute size*. India has also maintained its lead over China in pharmaceutical exports with a year-on-year growth of 7.55 per cent to US\$ 12.54 billion in 2015, according to data from the Ministry of Commerce and Industry.

Overall drug approvals given by the US Food and Drug Administration (USFDA) to Indian companies have nearly doubled to 201 in FY 2015-16 from 109 in FY 2014-15 an increase of 84 per cent as per analysis by USFDA.

India's biotechnology industry comprising bio-pharmaceuticals, bio-services, bio-agriculture, bio-industry and bioinformatics is expected grow at an average growth rate of around 30 per cent a year and reach US\$ 100 billion by 2025. Biopharma, comprising vaccines, therapeutics and diagnostics, is the largest sub-sector contributing nearly 62 per cent of the total revenues at Rs 12,600 crore (US\$ 1.9 billion).

Government Initiatives

The Addendum 2015 of the Indian Pharmacopoeia (IP) 2014, published by the Indian Pharmacopoeia Commission (IPC) on behalf of the Ministry of Health & Family Welfare, is expected to play a significant role in enhancing the quality of medicines that would in turn promote public health and accelerate the growth and development of pharmaceutical sector.

The Government of India unveiled 'Pharma Vision 2020' aimed at making India a global leader in end-to-end drug manufacture. Approval time for new facilities has been reduced to boost investments. Further, the government introduced mechanisms such as the Drug Price Control Order and the National Pharmaceutical Pricing Authority to deal with the issue of affordability and availability of medicines.

Some of the major initiatives taken by the government to promote the pharmaceutical sector in India are as follows:

- Government of India's decision to increase Foreign Direct Investment (FDI) in existing pharmaceuticals companies to 74 per cent is expected to boost Mergers and Acquisitions (M&As) and Private Equity (PE) investments in the pharmaceuticals sector in the country.
- Indian Pharmaceutical Association (IPA), the professional association of pharmaceutical companies in India, plans to prepare data integrity guidelines which will help to measure and benchmark the quality of Indian companies with global peers.

- At the launch of Cluster Development Programme of pharmaceutical sector, MrAnanth Kumar, Minister of Fertiliser and Chemicals, announced that six pharmaceutical parks will be

approved and established this year which will have sufficient infrastructure and facilities for testing and treatment of drugs and also for imparting training to industry professionals.

Road Ahead

The Indian pharmaceutical market size is expected to grow to US\$ 100 billion by 2025, driven by increasing consumer spending, rapid urbanisation, and raising healthcare insurance among others.

Going forward, better growth in domestic sales would also depend on the ability of companies to align their product portfolio towards chronic therapies for diseases such as cardiovascular, anti-diabetes, anti-depressants and anti-cancers that are on the rise.

The Indian government has taken many steps to reduce costs and bring down healthcare expenses. Speedy introduction of generic drugs into the market has remained in focus and is expected to benefit the Indian pharmaceutical companies. In addition, the thrust on rural health programmes, lifesaving drugs and preventive vaccines also augurs well for the pharmaceutical companies.

BRIEF MANUFACTURING PROCESS

Forms Of Product

The manufacturing process of Formulations differs from product to product i.e. between Tablets, Injectibles (Liquid or Dry Powder), Capsules and Powders. However, it typically involves a fixed series of steps under controlled conditions of temperature, relative humidity, hygiene and specific classified conditions to manufacture the finished products. For each product, we identify several alternative specification of manufacturing process and choose the most appropriate for the situation, viz., Stability during shelf life, economic, patent non-infringing, achieving a desired quality standard, environment impact, etc. It is then suitably packed in different packaging material like Strip Packing, Blister Packing, Bottle packing or Sachets depending on the requirements of the customer. The basic series of process for manufacturing is as follows

A. ORAL LIQUID

The dedicated Oral Liquid Products are manufactured in a controlled air environment under strict hygienic conditions, on fully automatic line. It is a fully automatic line from initial bottle washing up to the final packaging of the products. We have made efforts to secure a no contamination in order to achieve desired quality of the products. Further, we are having in-house facilities for manufacturing Pet Bottles on Fully Automatic Blowing Machine. The production process in this plant is suitable for both pet and glass bottles.

B. CAPSULES:

Our Company has automatic capsule filling machine which is suitable for filling powders and pellets. The machine is functional in use as they have capabilities for output and over rules handy operations. It also conforms to the GMP guidelines with various safety features for maximum protection. Capsule fillers are used to fill gelatin with pre determined quantity of liquids, powders, pellets, tablets. Capsules are normally fed into the machine, the filler then align, opens and accurately fills each capsule and recloses. Fillers generate minimum dust with lowest level of product loss. Non-separated, double loaded capsules and improperly inserted capsules are automatically rejected by machines to maintain the consistency in the quality of product. Most capsule fillers are characterized with fast changeover time to accommodate a variety of capsules in terms of shapes and size.

These machines requires minimal maintenance and easy to clean. Also, the installation of speed adjusting equipment and automatic counters ensures the right quantity of capsules being filled and packed.

C. TABLETS:

The manufacture of tablets is a complex multi-stage process under which the materials change their physical characteristics a number of times before the final dosage form is produced. The tablets have been made by granulation; wet granulation and dry granulation. Regardless of whether tablets are made by direct compression or granulation, the steps of milling and mixing is the same. Numerous unit processes are involved in making tablets, including particle size reduction and sizing, blending, granulation, drying, compaction, and (frequently) coating.

D. INJECTIBLES

Injectable drug products are developed into several different types depending upon the characteristics of the drug, the desired onset of action of the drug, and the desired route of administration. Once the pre-formulation and formulation studies have identified a suitable drug product, the next step includes learning how the formulation behaves/interacts in an aseptic manufacturing facility. At this point in the manufacturing process the formulated drug product enters the clean room. It remains under these conditions until the product is filled, stoppered, and capped. Microfilters are used to remove particles in the 0.1 to 10 micron size range from the formulated drug product. The next step in the process is to sterilize the solution using one of the filters. Once the product has been filtered into a sterile filling container and the filter passes the post-fill integrity test, it is now ready to fill into its primary container. Sterile tubing is placed into the sterile solution, which leads first to pumps and then to filling needles. Once the vials have been filled, they travel down the filling line to have pre-sterilized stoppers inserted. Caps are used to secure the stopper in the neck of the vial to prevent the stopper from coming out either over time or during handling. After the product has been manufactured, tested, it moves to Inspection. Once the product is released from Inspection, it moves to Labeling. After labeling, the product is packaged.

E. DRY POWDER

At first weighing and dispensing of all ingredients takes place required for manufacturing dry powder. Filtering of ingredients is done using a mechanical shifter. After filtering all the ingredients the powder is transferred to drum mixer. Drum mixer's provide efficient mixing and leave very little

build up within the mixer. The drum mixers are configured in such a manner that proper mixing and as desired quality control of the end product is attained. The next step is filling and scaling of dry powder manufactured by automatic machine into the bottles. These bottles are then labelled using automatic labelling machine. After these bottles are labelled packing and cartoning of these bottles takes place using packing and cartoning machine.

OUR PRODUCTS:

Set out below is a brief description of our main product areas:

1. Antibiotics

Antibiotics or antibacterials are a type of antimicrobial used specifically against bacteria, and are often used in medical treatment of bacterial infections. They may either kill or inhibit the growth of bacteria. Our products in this therapy area are Amoxicillin, Clavulanic Acid, Cefixime, Cefuroxime, Cefpodoxime and Cefalexin

2. Antimalarial medications

Antimalarial medications, also known as antimalarials, are designed to prevent or cure malaria. APPLICABLE LAWS AND REGULATIONS

BUSINESS/TRADE RELATED LAWS/REGULATIONS

The Pharmacy Act, 1948

The Pharmacy Act was enacted on March 4, 1948 by the Indian Parliament to regulate the profession and practice of pharmacy. The Pharmacy Council of India was constituted for framing and implementing the Education Regulations for minimum qualifications required under the Act for a person to get himself / herself registered as a pharmacist. The Pharmacy Council of India after due inspection gives approval to the institutions who conduct courses of Diploma in Pharmacy or Degree in Pharmacy. The Act provides for the constitution of state pharmacy councils for 117 the maintenance of Registers of Qualified Pharmacists and to prohibit the dispensing of medicine on the prescription of a Medical Practitioner by the persons other than Registered Pharmacists.

The Drugs and Cosmetics Act, 1940 (“DCA”)

The Drugs and Cosmetics Act, 1940 (the “DCA Act”) regulates the import, manufacture, distribution and sale of drugs in India as well as aspects relating to instalment, packing and testing as well as matters pertaining to drug formulations, instalment and APIs. It provides the procedure for testing and licensing new drugs. These procedures involve obtaining a series of approvals for different stages at which the drugs are tested, before the Drug Controller General of India, an authority established under the DCA Act (“DCGI”) grants the final license to allow the drugs to be manufactured and marketed. Obtaining an approval from DCGI involves an application to be made to the DCGI. Upon examining the medical data, the chemical data and the toxicity of the drug, the DCGI issues a no objection certificate. The no objection certificate allows the manufacturer of the drug to move on to the next stage of testing at the central drug laboratories. The drug is subject to a series of tests at the central drug laboratories, for its chemical integrity and analytical purity. If the drug meets the standards required by the authority, the authority issues a certificate in that respect.

The DCGI issues a manufacturing and marketing license in respect of APIs. These licenses are submitted by the company seeking to produce the drug, to the drug control administration of the state which clears the drug for manufacturing and marketing. The drug control administration also provides

the approval for technical staff as per the DCA Act and Drugs and Cosmetics Rules, 1945 framed under the legislation abiding by the WHO and CGMP inspection norms. The approvals for licensing are to be obtained from the drug control administration. The Central Drugs Standard Control Organisation (“CDSCO”) is responsible for testing and approving APIs and formulations in consultation with the DCGI.

The approval process for conducting clinical trials, manufacturing and marketing of a drug depends on whether the drug is a new chemical entity or a Recombinant Deoxyribonucleic Acid (“RDNA”) product. For new chemical entities, the DCGI is the approving authority. However, for RDNA products, applications have to be submitted to the Department Of Biotechnology (“DBT”) after which they are processed for scientific, safety and efficacy issues by an advisory committee comprising the DBT, the chairman of the review committee on genetic manipulation, the DCGI, the Ministry of Health and Family Welfare, and other experts. If the advisory committee is satisfied, it then recommends the proposal to DCGI who then clears the proposal for Phase I clinical trials. The DCGI reviews the clinical data after every phase based on which it grants approval for entering into the next phase. The Phase III clinical data is 150 examined by the DCGI in consultation with the Genetic Engineering Approval Committee (“GEAC”). Thereafter, the DCGI grants the final approval for manufacturing and marketing the product.

According to the DCA Act and the applicable guidelines for generating pre-clinical and clinical data for RDNA based vaccines, diagnostics and other human clinical trials can be conducted in four sequential phases that may overlap under some circumstances:

- Phase I: In this phase, the drug or treatment is introduced into a small group of healthy human beings to evaluate its safety, determine a safe dosage range and identify its side effects.
- Phase II: This phase involves studies on a selected group of patients to identify possible adverse effects and risks, to determine the efficacy of the product for specific targeted diseases and to further evaluate its safety.
- Phase III: Pursuant to Phase II evaluations demonstrating that a dosage range of the product is effective and has an acceptable safety profile, further trials are undertaken on larger groups of patients to confirm their effectiveness, monitor side effects, compare it to commonly used treatments and collect information that will allow the drug or treatment to be used safely.
- Phase IV: In this phase, a study of post-marketing information with regard to the drug’s risks, benefits and optimal use is carried out.

Further, the DCGI has vide a notification, made registration of human clinical trial mandatory from June 15, 2009, which will be applicable for clinical trials initiated after June 15, 2009.

Under the DCA Act, the Government may, by notification in the official gazette, regulate or restrict the manufacture, sale or distribution of a drug, if it is satisfied that such drug is essential to meet the requirements of an emergency arising due to epidemic or natural calamities and that in the public interest, it is necessary or expedient to do so or that the use of such drug is likely to involve any risk to human beings or animals or that it does not have the therapeutic value claimed or purported to be claimed for it or contains ingredients and in such quantity for which there is no therapeutic justification.

(i) Use of estimates

The preparation of financial statements in conformity with Indian GAAP requires the management to make judgments, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities and the disclosure of contingent liabilities, at the end of the reporting period. Although these estimates are based on the management's best knowledge of current events and actions, uncertainty about these assumptions and estimates could result in the outcomes requiring a material adjustment to the carrying amounts of assets or liabilities in future periods.

bringing the asset to its working condition for the intended use. Any trade discounts and rebates are deducted in arriving at the purchase price.

Subsequent expenditure related to an item of fixed asset is added to its book value only if it increases the future benefits from the existing asset beyond its previously assessed standard of performance. All other expenses on existing fixed assets, including day-to-day repair and maintenance expenditure and cost of replacing parts, are charged to the statement of profit and loss for the period during which such expenses are incurred.

The Company adjusts exchange differences arising on translation/settlement of long-term foreign currency monetary items pertaining to the acquisition of a depreciable asset to the cost of the asset and depreciates the same over the remaining life of the asset. In accordance with MCA circular dated August 09, 2012, exchange differences adjusted to the cost of fixed assets are total differences, arising on long-term foreign currency monetary items pertaining to the acquisition of a depreciable asset, for the period. In other words, the Company does not differentiate between exchange differences arising from foreign currency borrowings to the extent they are regarded as an adjustment to the interest cost and other exchange differences arising from foreign currency borrowings to the extent they are regarded as an adjustment to the interest cost and other exchange difference.

Gains or losses arising from derecognition of fixed assets are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the statement of profit and loss when the asset is derecognised.

(iv) Depreciation on tangible fixed assets and amortization of intangible assets

Depreciation is provided using the straight-line method as per the useful lives of assets estimated by the management, or at the rates as per the useful life prescribed under Schedule II of the Act (from April 1, 2014) and at the rates prescribed under Schedule XIV of the Companies Act, 1956 (from April 1, 2009 to March 31, 2014), whichever is higher.

(v) Intangible assets

Intangible assets acquired separately are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost less accumulated amortization and accumulated impairment losses, if any.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the statement of profit and loss when the asset is derecognised.

(vi) Leases

Where the Company is lessee

Leases, where the lessor effectively retains substantially all the risks and benefits of ownership of the leased item, are classified as operating leases. Operating lease payments are recognised as an expense in the statement of profit and loss on a straight-line basis over the lease term.

(vii) Borrowing costs

Borrowing cost includes interest and ancillary costs incurred in connection with the arrangement of borrowings.

Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalised as part of the cost of the respective asset. Ancillary costs incurred in connection with arrangement of long term borrowings. All other borrowing costs are expensed in the period they occur.

(viii) Impairment of tangible and intangible assets

The Company assesses at each reporting date whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Company estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) net selling price and its value in use. The recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets. Where the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining net selling price, recent market transactions are taken into account, if available. If no such transactions can be identified, an appropriate valuation model is used.

Impairment losses are recognised in the statement of profit and loss.

After impairment, depreciation is provided on the revised carrying amount of the asset over its remaining useful life.

An assessment is made at each reporting date as to whether there is any indication that previously recognised impairment losses may no longer exist or may have decreased. If such indication exists, the Company estimates the asset's or cash-generating unit's recoverable amount. A previously recognised impairment loss is reversed only if there has been a change in the assumptions used to determine the asset's recoverable amount since the last impairment loss was recognised. The reversal is limited so that the carrying amount of the asset does not exceed its recoverable amount, nor exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognised for the asset in prior years. Such reversal is recognised in the statement of profit and loss.

(ix) Investments

Investments, which are readily realisable and intended to be held for not more than one year from the date on which such investments are made, are classified as current investments. All other investments are classified as long-term investments.

On initial recognition, all investments are measured at cost. The cost comprises purchase price and directly attributable acquisition charges such as brokerage, fees and duties.

Current investments are carried in the financial statements at lower of cost and fair value determined on an individual investment basis. Long-term investments are carried at cost. However, provision for diminution in value is made to recognize a decline other than temporary in the value of the investments.

On disposal of an investment, the difference between its carrying amount and net disposal proceeds is charged or credited to the statement of profit and loss.

(x) Inventories

Raw materials, components, stores and spares and packing materials are valued at lower of cost and net realisable value. However, materials and other items held for use in the production of inventories are not written down below cost if the finished products in which they will be incorporated are expected to be sold at or above cost. Cost of raw materials, components, stores and spares and packing material is determined on a weighted average basis.

Semi-finished goods and finished goods are valued at lower of cost and net realisable value. Cost includes direct materials and labour and a proportion of manufacturing overheads based on normal operating capacity. Cost of finished goods is determined on actual cost basis. Net realisable value is the estimated selling price in the ordinary course of business, less estimated costs of completion and estimated costs necessary to make the sale.

(xi) Revenue recognition

Revenue is recognised to the extent it is probable that the economic benefits will flow to the Company and that the revenue can be reliably measured. The following specific recognition criteria must also be met before revenue is recognised:

Sale of goods

Revenue from sale of goods is recognised when all the significant risks and rewards of ownership of the goods have been passed to the buyer. The Company collects sales taxes and value added taxes (VAT) on behalf of the government and, therefore, these are not economic benefits flowing to the Company. Hence, they are excluded from revenue. Excise duty deducted from revenue (gross) is the amount that is included in the revenue (gross) and not the entire amount of liability arising during the year.

Interest

Interest income is recognised on a time proportion basis taking into account the amount outstanding and the applicable interest rate.

Dividends

Dividend income is recognised when the Company's right to receive dividend is established by the reporting date.

xii) Foreign currency translation

Foreign currency transactions and balances

Initial recognition

Foreign currency transactions are recorded in the reporting currency, by applying to the foreign currency amount the exchange rate between the reporting currency and the foreign currency at the date of the transaction.

Conversion

Foreign currency monetary items are retranslated using the exchange rate prevailing at the reporting date. Non-monetary items, which are measured in terms of historical cost denominated in a foreign currency, are reported using the exchange rate at the date of the transaction.

Exchange differences

The Company accounts for exchange differences arising on translation/settlement of foreign currency monetary items as below:

- 1) Exchange differences arising on long-term foreign currency monetary items related to acquisition of a fixed asset are capitalised and depreciated over the remaining useful life of the asset.
- 2) Exchange differences arising on other long-term foreign currency monetary items are accumulated in the Foreign Currency Monetary Item Translation Difference Account and amortized over the remaining life of the concerned monetary item.
- 3) All other exchange differences are recognised as income or as expenses in the period in which they arise.

For the purpose of 1 and 2 above, the Company treats a foreign currency monetary item as long-term foreign currency monetary item, if it has a term of 12 months or more at the date of its origination. In accordance with MCA circular dated 09 August 2012, exchange differences for this purpose, are total differences arising on long-term foreign currency monetary items for the period. In other words, the Company does not differentiate between exchange differences arising from foreign currency borrowings to the extent they are regarded as an adjustment to the interest cost and other exchange difference.

xiii) Retirement and other employee benefits

Retirement benefit in the form of provident fund and superannuation fund are defined contribution schemes. The contributions to the provident fund and superannuation fund are charged to the statement of profit and loss for the year when the employee renders the related service. The Company has no obligation, other than the contribution payable to the provident fund and superannuation fund.

The Company provides gratuity expenses on the basis of actuarial valuation at each year-end. Actuarial valuation is carried out using the projected unit credit method. Actuarial gains and losses for the defined benefit plan are recognised in full in the period in which they occur in the statement of profit and loss.

xiv) Income Tax

Tax expense comprises current and deferred tax. Current income-tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income-tax Act, 1961 enacted in India. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date.

Deferred income taxes reflect the impact of timing differences between taxable income and accounting income originating during the current year and reversal of timing differences for the earlier years. Deferred tax is measured using the tax rates and the tax laws enacted or substantively enacted at the reporting date.

Deferred tax liabilities are recognised for all taxable timing differences. Deferred tax assets are recognised for deductible timing differences only to the extent that there is reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realised. In situations where the Company has unabsorbed depreciation or carry forward tax losses, all deferred tax assets are recognised only if there is virtual certainty supported by convincing evidence that they can be realised against future taxable profits.

In the situations where the Company is entitled to a tax holiday, no deferred tax (asset or liability) is recognised in respect of timing differences which reverse during the tax holiday period, to the extent the Company's gross total income is subject to the deduction during the tax holiday period. Deferred tax in respect of

timing differences which reverse after the tax holiday period is recognised in the year in which the timing differences originate. However, the Company restricts recognition of deferred tax assets to the extent that it has become reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which such deferred tax assets can be realised. For recognition of deferred taxes, the timing differences which originate first are considered to reverse first.

At each reporting date, the Company re-assesses unrecognised deferred tax assets. It recognises unrecognised deferred tax asset to the extent that it has become reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which such deferred tax assets can be realised.

The carrying amount of deferred tax assets are reviewed at each reporting date. The Company writes-down the carrying amount of deferred tax asset to the extent that it is no longer reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which deferred tax asset can be realised. Any such write-down is reversed to the extent that it becomes reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available.

Deferred tax assets and deferred tax liabilities are offset, if a legally enforceable right exists to set-off current tax assets against current tax liabilities and the deferred tax assets and deferred tax liabilities relate to the same taxable entity and the same taxation authority.

xv) **Earning Per Share**

Basic earnings per share are calculated by dividing the net profit or loss for the period attributable to equity shareholders by the weighted average number of equity shares outstanding during the period. The weighted average number of equity shares outstanding during the period is adjusted for events such as bonus issue, bonus element in a rights issue, share split, and reverse share split (consolidation of shares) that have changed the number of equity shares outstanding, without a corresponding change in resources. For the purpose of calculating diluted earnings per share, the net profit or loss for the period attributable to equity shareholders and the weighted average number of shares outstanding during the period are adjusted for the effects of all dilutive potential equity shares.

xvi) **Provisions**

A provision is recognised when the Company has a present obligation as a result of past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. Provisions are not discounted to their present value and are determined based on the best estimate required to settle the obligation at the reporting date. These estimates are reviewed at each reporting date and adjusted to reflect the current best estimates.

Where the Company expects some or all of a provision to be reimbursed, for example under an insurance contract, the reimbursement is recognised as a separate asset but only when the reimbursement is virtually certain. The expense relating to any provision is presented in the statement of profit and loss, net of any reimbursement.

xvii) **Contingent liabilities**

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the Company or a present obligation that is not recognised because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognised because it cannot be measured reliably. The Company does not recognize a contingent liability but discloses its existence in the financial statements.

xviii) Cash and cash equivalents

Cash and cash equivalents for the purposes of cash flow statement comprise of cash at bank and in hand and short-term investments with an original maturity of three months or less

- c) For NRIs, a Bid Amount of up to Rs. 200,000 may be considered under the Retail Category for the purposes of allocation and a Bid Amount exceeding Rs. 200,000 may be considered under the Non-Institutional Category for the purposes of allocation.
- d) Bids by QIBs and NIIs must be for such minimum number of shares such that the Bid Amount exceeds Rs. 200,000 and in multiples of such number of Equity Shares thereafter, as may be disclosed in the Bid cum Application Form and the RHP/Prospectus, or as advertised by the Issuer, as the case may be. Bidders should refer to instructions contained in paragraphs 4.1.1, 4.1.2 and 4.1.3.

4.2.2 FIELD 4 & 5: BID OPTIONS REVISION 'FROM' AND 'TO'

- (a) Apart from mentioning the revised number of shares in the Revision Form, the Bidder must also mention the details of shares applied/bid for given in his or her ASBA Form or earlier Revision Form. For example, if a Bidder has Bid for three options in the ASBA Form and such Bidder is changing only one of the options in the Revision Form, the Bidder must still fill the details of the other two options that are not being revised, in the Revision Form. The members of the Syndicate, the Registered Brokers and the Designated Branches of the SCSBs may not accept incomplete or inaccurate Revision Forms.
- (b) In case of revision, Bid options should be provided by Bidders in the same order as provided in the ASBA Form.
- (c) In case of revision of Bids by RIIs, Employees and Retail Individual Shareholders, such Bidders should ensure that the Bid Amount, subsequent to revision, does not exceed Rs. 200,000. In case the Bid Amount exceeds Rs. 200,000 due to revision of the Bid or for any other reason, the Bid may be considered, subject to eligibility, for allocation under the Non-Institutional Category, not being eligible for Discount (if applicable) and such Bid may be rejected if it is at the Cut-off Price. The Cut-off Price option is given only to the RIIs, Employees and Retail Individual Shareholders indicating their agreement to Bid for and purchase the Equity Shares at the Issue Price as determined at the end of the Book Building Process.
- (d) In case the total amount (i.e., original Bid Amount plus additional payment) exceeds Rs. 200,000, the Bid will be considered for allocation under the Non-Institutional Category in terms of the DRHP. If, however, the RII does not either revise the Bid or make additional payment and the Issue Price is higher than the cap of the Price Band prior to revision, the number of Equity Shares Bid for shall be adjusted downwards for the purpose of allocation, such that no additional payment would be required from the RII and the RII is deemed to have approved such revised Bid at Cut-off Price.
- (e) In case of a downward revision in the Price Band, RIIs and Bids by Employees under the Reservation Portion, who have bid at the Cut-off Price could either revise their Bid or the excess amount paid at the time of Bidding may be unblocked in case of Bidders.

4.2.3 FIELD 6: PAYMENT DETAILS

- a) All Bidders are required to make payment of the full Bid Amount (less Discount, if applicable) along with the Bid Revision Form. In case of Bidders specifying more than one Bid Option in the ASBA Form, the total Bid Amount may be calculated for the highest of three options at net price, i.e. Bid price less discount issued, if any.
- b) Bidder may Issue instructions to block the revised amount based on cap of the revised Price Band (adjusted for the Discount (if applicable) in the ASBA Account, to the same Designated Intermediary through whom such Bidder had placed the original Bid to enable the relevant SCSB to block the additional Bid Amount, if any.
- c) In case the total amount (i.e., original Bid Amount less discount (if applicable) plus additional payment) exceeds Rs. 200,000, the Bid may be considered for allocation under the Non-Institutional Category in terms of the DRHP. If, however, the Bidder does not either revise the Bid or make additional payment and the Issue Price is higher than the cap of the Price Band prior to revision, the number of Equity Shares Bid for may be adjusted

downwards for the purpose of Allotment, such that additional amount is required blocked and the Bidder is deemed to have approved such revised Bid at the Cut-off Price.

- d) In case of a downward revision in the Price Band, RIIs, Employees and Retail Individual Shareholders, who have bid at the Cut-off Price, could either revise their Bid or the excess amount paid at the time of Bidding may be unblocked.

- d) **Illustration of the Book Building and Price Discovery Process**
Bidders should note that this example is solely for illustrative purposes and is not specific to the Issue; it also excludes Bidding by Anchor Investors.

Bidders can bid at any price within the Price Band. For instance, assume a Price Band of Rs.20 to Rs 24 per share, Issue size of 3,000 Equity Shares and receipt of five Bids from Bidders, details of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the Issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (Rs.)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the Issuer is able to Issue the desired number of Equity Shares is the price at which the book cuts off, i.e., Rs. 22.00 in the above example. The Issuer, in consultation with the BRLM, may finalise the Issue Price at or below such Cut-Off Price, i.e., at or below Rs. 22.00. All Bids at or above this Issue Price and cut-off Bids are valid Bids and are considered for allocation in the respective categories.

RESTRICTIONS ON FOREIGN OWNERSHIP OF INDIAN SECURITIES

Foreign investment in Indian securities is regulated through the Industrial Policy, 1991 of the Government of India and Foreign Exchange Management Act, 1999 (“**FEMA**”). While the Industrial Policy, 1991 prescribes the limits and the conditions subject to which foreign investment can be made in different sectors of the Indian economy, FEMA regulates the precise manner in which such investment may be made. Under the Industrial Policy, unless specifically restricted, foreign investment is freely permitted in all sectors of Indian economy up to any extent and without any prior approvals, but the foreign investor is required to follow certain prescribed procedures for making such investment.

The Government of India, from time to time, has made policy pronouncements on Foreign Direct Investment (“**FDI**”) through press notes and press releases. The Department of Industrial Policy and Promotion, Ministry of Commerce and Industry, Government of India (“**DIPP**”), has issued consolidated FDI Policy Circular of 2016 (“**FDI Policy 2016**”), which with effect from June 7, 2016, consolidates and supersedes all previous press notes, press releases and clarifications on FDI Policy issued by the DIPP that were in force. Further, DIPP has issued Press note 5, dated June 24, 2016 which introduces few changes in FDI Policy. The Government proposes to update the consolidated circular on FDI policy once every year and therefore, FDI Policy 2016 will be valid until the DIPP issues an updated circular.

The Reserve Bank of India (“**RBI**”) also issues Master Circular on Foreign Investment in India every year. Presently, FDI in India is being governed by Master circular on Foreign Investment dated July 01, 2015 as updated from time to time by RBI. In terms of the Master Circular, an Indian company may issue fresh shares to people resident outside India (who is eligible to make investments in India, for which eligibility criteria are as prescribed). Such fresh issue of shares shall be subject to inter-alia, the pricing guidelines prescribed under the Master Circular. The Indian company making such fresh issue of shares would be subject to the reporting requirements, inter-alia with respect to consideration for issue of shares and also subject to making certain filings including filing of Form FC-GPR.

Under the current FDI Policy of 2016, foreign direct investment in micro and small enterprises is subject to sectoral caps, entry routes and other sectoral regulations. FDI is permitted upto 100 % in Greenfield projects and 74% in Brownfield projects under the automatic route and FDI beyond 74% in Brownfield projects requires FIPB approval. FDI is permitted up to 100 percent under the automatic route in the hospital sector and in the manufacture of medical devices.

The transfer of shares between an Indian resident and a non-resident does not require the prior approval of the FIPB or the RBI, subject to fulfilment of certain conditions as specified by DIPP/RBI, from time to time. Such conditions include (i) the activities of the investee company are under the automatic route under the FDI Policy and transfer does not attract the provisions of the Takeover Regulations; (ii) the non-resident shareholding is within the sectoral limits under the FDI Policy; and (iii) the pricing is in accordance with the guidelines prescribed by the SEBI/ RBI. As per the existing policy of the Government of India, OCBs cannot participate in this Issue and in accordance with the extant FDI guidelines on sectoral caps, pricing guidelines etc. as amended by Reserve bank of India, from time to time. Investors are advised to confirm their eligibility under the relevant laws before investing and / or subsequent purchase or sale transaction in the Equity Shares of Our Company
